

Transport Production Services

Fact Sheet

Clean Harbors provides comprehensive fluids and solids handling, transportation, and disposal.

Fluid Handling, Transportation and Disposal

Clean Harbors pumps tanks and other vessels and transports the liquids to pipelines, storage tanks, and disposal locations. We haul crude, condensate, frac oil, methanol fluids, produced water, and fresh potable water. Our fleet of vacuum and tank trucks includes -

- Body job vacs versatile in most sectors. They are ideal for spill clean-ups, fluid transfers, tank cleaning, and service rig work.
- Turbo vacs with 5,300 CFM suction capabilities, which is almost double that of a body job vac. And with a remote controlled 360° swivel boom, our turbo vacs are perfect for high lift applications.
- Trailer vacs ideal for long hauling applications, with hauling capacities up to 180 bbls.
- Sour sealed and fresh potable water tank trucks.

Solids Handling, Transportation & Disposal

Clean Harbors provides efficient and safe waste transportation and disposal of solid hazardous and non-hazardous waste including, but not limited to, drilling mud and cuttings, hydrocarbon contaminated soil, salt contaminated soil, gravel, and railway ties. We also offer onsite solid waste storage and disposal with lugger bins and sludge boxes.

We also have dry vacuum trucks for spills consisting of dry materials such as lime, cement, or dry sands. These materials are too fine to efficiently gather or transport by other means.

Hydro-excavation

Clean Harbors provides a range of industrial, municipal, and pipeline hydrovac services including-

- Daylighting and trenching
- Piling and test holes
- Debris removal and culvert clean outs
- Spill and pipeline break clean up

Focus on Safety

Health & Safety is Clean Harbors' #1 priority —companywide. Employees at all levels of the company share this philosophy and are committed to ensuring our safety goals are met on your sites and ours.

Our large fleet of hydrovacs includes tri-drives, tandems, and mini-hydrovacs, so we have the capacity to effectively execute any project scope. All Clean Harbors hydrovacs come equipped with bonding mats when excavating around live electrical lines. All operators are trained and certified in the use of bonding mats.

Hydrostatic Testing

We provide complete hydrostatic testing for new and existing pipelines. Clean Harbors provides experienced personnel, test equipment, filling pumps, positive displacement pumps, analytical test trailers, and reporting. We can also provide hydrostatic test water treatment.
