EXECUTIVE SUMMARY

Foreword

Tetra Tech Canada Inc. (Tetra Tech) was retained by Clean Harbors Canada Inc. (Clean Harbors) to sample all in-use dugouts and water wells located within a 1.6 km radius of the Ryley Class I Hazardous Waste Facility in Ryley, Alberta.

This sampling program is required by Alberta's *Environmental Protection and Enhancement Act* (EPEA). The facility operates under Alberta Environment and Protected Areas (EPA), in accordance with EPEA Approval No. 10348-03-01 (Appendix A). The program includes the surface water testing of all in-use dugouts and water wells, as identified during the October 1996 baseline sampling program and subsequent updates. The permit to operate defines "in-use" as stored water used for human consumption, cooking, washing, and gardening or livestock purposes. An additional two dugouts (9A, 23) were sampled in 2023 that are now within the 1.6 km radius due to the recent northward expansion of Clean Harbors Ryley Industrial Waste Management Facility. In addition, groundwater wells within a 1.6 km radius of the facility were reviewed and assessed for possible sampling as per the most recent Approval.

Twenty-one dugouts were inspected and sampled during the 2023 dugout sampling program, which is the 28th annual sampling event, including the baseline event in 1996. The baseline sampling program is detailed in the report titled *Water Sampling and Testing Program*. All annual dugout sampling has taken place in October.

Discussion and Recommendations

Analytical results of the dugout sampling program conducted in October 2023 indicate that the Ryley Class I Hazardous Waste Facility does not appear to be adversely impacting water quality in dugouts within the 1.6 km radius sampled. No water wells were accessible for sampling.

Some parameters analyzed in 2023 exhibited an upward trend in concentrations in one or more dugouts relative to historical baseline values, but the majority of concentrations were within the historical ranges for those parameters.

Select parameters had historically high values or concentrations for specific parameters during the 2023 sampling and should continue to be monitored and evaluated in future sampling events.

The following conclusions are based on the 2023 dugout and water well monitoring program:

- Analytical results of the dugout and water well monitoring program conducted in October 2023 indicate that the Ryley Class I Hazardous Waste Facility does not appear to be adversely impacting water quality in dugouts within a 1.6 km radius.
- Some parameters analyzed in 2023 exhibited new maximum observed values in one or more dugouts relative to historical baseline values, but the majority of concentrations were within the historical ranges for those parameters.
- Select parameters having historically high values or concentrations during the 2023 monitoring event should continue to be monitored and evaluated in future sampling events.
- No water wells were located within the 1.6 km radius of the site that could be included in the sampling program.
- A similar monitoring program is recommended for October 2024, as part of the ongoing site Approval compliance process.

- Each landowner should be forwarded a copy of the water chemistry analysis report pertaining to the dugout(s) sampled on their property once the 2023 report is finalized and submitted to AEPA.
- Area water wells should be reassessed every five years to confirm if any new wells have been established and should be included in the annual dugout and water well monitoring program.

LIMITATIONS OF REPORT

This report and its contents are intended for the sole use of Clean Harbors Canada Inc. and their agents. Tetra Tech Canada Inc. (Tetra Tech) does not accept any responsibility for the accuracy of any of the data, the analysis, or the recommendations contained or referenced in the report when the report is used or relied upon by any Party other than Clean Harbors Canada Inc. or for any Project other than the proposed development at the subject site. Any such unauthorized use of this report is at the sole risk of the user. Use of this report is subject to the terms and conditions stated in Tetra Tech Canada Inc.'s Services Agreement. Tetra Tech's Limitations on the Use of This Document are provided in Appendix B of this report.

1.0 INTRODUCTION

Tetra Tech Canada Inc. (Tetra Tech) was retained by Clean Harbors Canada Inc. (Clean Harbors) to sample all in-use groundwater wells and dugouts located within a 1.6 km radius of the Ryley Class I Hazardous Waste Facility in Ryley, Alberta. The sampling program is required by Alberta's *Environmental Protection and Enhancement Act* (EPEA). The facility operates under Alberta Environment and Protected Areas (EPA), in accordance with EPEA Approval No.10348-03-01 (Appendix A).

The program included the water testing of all in-use groundwater wells and dugouts, as identified during the baseline sampling program completed during the fall of 1996 and any additions or subtractions from subsequent annual sampling events. Based on an updated landowner survey in May 2023, there are no potable groundwater wells within the 1.6 km radius to be sampled as local groundwater quality is poor and most residents rely on EPCOR water supply piped to Ryley. The only exception is the Doyle Booth property which utilizes the on-site dugout as its domestic water supply source (Dugout 1 in Table B).

The definition of "in-use" is water used for human consumption, cooking, washing, gardening or livestock purposes. In 2023, the new Approval for developing lands north of the existing landfill extended the 1.6 km limit about 750 m to the north and required five additional dugouts to be included in the annual sampling program. However, three of the dugouts located on the Westmancoat property to the northwest of the site could not be sampled as Tetra Tech was not able to obtain permission from the landowner after multiple attempts to contact them. An additional two dugouts (9A, 23 on Figure 1) were sampled in 2023 that are within the new 1.6 km radius due to the recent northward expansion of Clean Harbors Ryley Industrial Waste Management Facility and these dugouts are defined as "in-use." Water wells within the 1.6 km radius of the site were reviewed in 2023 to update these potential receptors near the site. This exercise is described in Section 3.0.

Twenty-one (21) dugouts were inspected and sampled during the 2023 dugout and water well monitoring program, which is the 28th annual sampling event, including the baseline event in 1996. The baseline sampling program is detailed in the report titled *Water Sampling and Testing Program*[1]. All annual dugout and water well monitoring has taken place in October since 1996.

This report presents the field observations and analytical water quality results of the 2023 sampling program with reference to recently collected data.

2.0 FIELD SAMPLING METHODS

2.1 Landowner Summary

The contact information for each landowner and their number of dugouts in the sampling program is presented in Table A. All landowners were contacted about two weeks prior to the sampling event, and each will be provided with a copy of the water chemistry of their dugout(s) once this report is finalized and sent to EPA. Landowners and contact information was updated as necessary in April and September 2023. The location of each sampled water source and residence, if found, is indicated on Figure 1.

Table A: Landowner Information

Landowner (October 2023)	Contact Name and (Number of Dugouts)	Mailing Address	Telephone Number
D. Booth	Doyle Booth (1)	Box 185, Ryley, Alberta T0B 4A0	780.999.4577
Ewert Farms Ltd.	Mark Ewert (4)	Box 355, Ryley, Alberta T0B 4A0	780.914.5766
B.L. Lyons (now Clean Harbors Canada Inc.)	Brian Lyons (5) *	Box 222, Ryley, Alberta T0B 4A0	780.984.5026
T. Magneson	Terry Magneson (5)	Box 374, Ryley, Alberta T0B 4A0	780.603.1537
County of Beaver	c/o Margaret Jones (1)	Box 140, Ryley, Alberta T0B 4A0	780.663.3730 (direct 825.385.0061)
W. Winsnes	William Winsnes (1)	Box 335, Ryley, Alberta T0B 4A0 SW8-50-17-W4M	780.699.4009
G. Balash	George and Rose Balash (3)	Box 291, St Paul, Alberta T0A 3AO gsbfarm@gmail.com	780.646.2001
D. Lyons	Darryl Lyons (1)	Box 330, Ryley, Alberta T0A 3A0	780.405.1110

* Note: Brian Lyons' property (SW and SE 16) was purchased by Clean Harbors in July 2023. It is agreed that Brian Lyons will continue to receive water chemistry data for dugouts on these lands as long as he continues to farm the lands.

2.2 Sampling Procedure

The water samples were collected on October 16 and 17, 2023 by two Tetra Tech personnel. A Health and Safety Plan was completed and reviewed prior to initiating sampling. Twenty-one dugouts were sampled at eight properties, and 23 samples were collected: one from each dugout, plus two duplicate samples. Subsamples were collected from the four corners of each respective dugout at 0.20 m to 0.30 m below surface and about 2 metres from the dugout edge and submitted as an equal-weighted composite sample. Care was taken not to disturb bank or bed sediments in the sampling area.

All samples were obtained using standard procedures that minimized potential for contamination during collection, handling, preservation, and transportation to ensure representative samples were collected and tested. Table B contains a summary of the information gathered during the sampling program, including sample name, legal land description and relative dugout location with locations on Figure 1. The lands containing Dugout 12 (Magneson D.3) is incorporated into the Clean Harbor expansion area and therefore, no longer monitored. All dugouts were photographed with representative photos presented in Appendix E.

Table B: Sample Location Information

Sample	Sample Name	Legal Land Description (W4M)	Dugout Location
1	Booth D.1	NW ¼ 10-50-17	Dugout northwest of house
2	Ewert D.1	SW ¼ 15-50-17	Dugout south of centre barn
3	Ewert D.2	SW ¼ 15-50-17	Extreme west dugout
4	Ewert D.3	SW ¼ 15-50-17	Extreme east dugout
5	Ewert D.4	SW ¼ 15-50-17	Southeast corner of southwest quarter of Section 15
6	B. Lyons D.1*	SE ¼ 16-50-17	Northeast dugout on southeast quarter of Section 16
7	B. Lyons D.2*	SE ¼ 16-50-17	Northwest dugout on southeast quarter of Section 16
8	B. Lyons D.3*	SE ¼ 16-50-17	Southwest dugout on southeast quarter of Section 16
9	B. Lyons D.4*	SW ¼ 16-50-17	Southwest dugout on southwest quarter of Section 16
9A	B. Lyons D.5*	SW ¼ 16-50-17	Northwest dugout on southwest quarter Section of 16
10	Magneson D.1	SW ¼ 9-50-17	Dugout with windmill on northeast end of yard

Table B: Sample Location Information

Sample	Sample Name	Legal Land Description (W4M)	Dugout Location
11	Magneson D.2	SW ¼ 9-50-17	Southeast corner of northwest quarter of Section 9
13	Magneson D.4	SW ¼ 9-50-17	South end of southwest quarter of Section 9, east of main house
14	Magneson D.5	SW ¼ 9-50-17	East end of southwest quarter of Section 9, west of Clean Harbors
15	Magneson D.6	SW ¼ 9-50-17	South end of southwest quarter of Section 9, north of main house
16	Beaver County D.1	NW ¼ 3-50-17	Dugout south of house, northwest quarter of Section 3
19	Winsnes D.1	SW ¼ 4-50-17	Dugout on southwest corner of southwest quarter of Section 4
20	Balash D.1	NE ¼ 5-50-17	Dugout south of west approach, northeast quarter of Section 5
21	Balash D.2	SE ¼ 8-50-17	Dugout on southeast quarter of Section 8
22	Balash D.3	SE ¼ 8-50-17	Dugout is immediately west of Balash D.2
23	D. Lyons D.1	16-NE16-50-17-W4M	Middle of East half of Northeast Section 16

* Lands owned by Clean Harbors Canada Inc. since July 2023.

ALS Laboratory Group (ALS) of Edmonton was the laboratory selected to perform the sample analysis and is certified by the Canadian Association of Laboratory Accreditation (CALA) for the parameters tested. ALS prepared sampling sets beforehand with bottles for each dugout to be tested. These sets included the individual sample bottles and preservatives needed to perform the analysis required by the Permit to Operate.

The following analytical parameters were tested for all dugouts and duplicate samples, as required by Approval No. 10348-03-01, Section 4.5:

- Major ions: calcium, magnesium, sodium, potassium, chloride, carbonate, bicarbonate, and sulphate
- Dissolved metals: aluminum, antimony, arsenic, barium, boron, cadmium, chromium, hexavalent chromium (chromium VI), cobalt, copper, lead, manganese, mercury, molybdenum, nickel, selenium, silver, thallium, tin, uranium, and zinc
- pH (field and laboratory)
- Electrical conductivity (EC) (field and laboratory)
- Benzene, toluene, ethylbenzene, xylenes (BTEX)
- Petroleum hydrocarbon (PHC) fractions F1 and F2
- Total dissolved solids (TDS)
- Total suspended solids (TSS)
- Chemical oxygen demand (COD)
- Dissolved organic carbon (DOC)
- Nutrients: ammonia (as N), Total Kjeldahl Nitrogen (TKN), nitrate (as NO3-N), nitrite (as NO2-N), and total phosphorus
- Phenols

Analytical request forms, including chain-of-custody data, were completed by Tetra Tech when the samples were submitted to the laboratory for analysis.

Hexavalent chromium (Chromium VI) was not analyzed in 2023 due to an oversight on the CoC. A multi-year laboratory quotation was obtained in 2021 for the 2021 through 2023 sampling events and was not updated to reflect the revised Approval in time for the 2023 sampling program. Hexavalent chromium analysis will be included in subsequent years.

In addition to lab testing, field parameter testing of the composite water sample was carried out at each dugout for the following:

- pH
- Electrical conductivity (EC)

Photographs were taken of each monitored dugout, and visual inspections were conducted to identify notable sheen, colour, odour, or other physical characteristics of the water in each dugout.

The analytical reports for each sample collected were forwarded to Tetra Tech once the analysis was completed. The 2023 laboratory Certificate of Analysis, as received from ALS, is presented in Appendix C. Table 1 summarizes the data collected in the last five years, including the 2023 monitoring program for each dugout. Appendix D contains the historical dugout chemical analytical results from 1996 up to 2023 data.

2.3 Quality Control and Quality Assurance

To evaluate field sampling reproducibility, duplicate water samples were collected during the 2023 sampling event at an approximate rate of 10% of total samples collected. In October 2023, the duplicates were taken from Dugout 11 (Duplicate 1) and Dugout 1 (Duplicate 2) and submitted as blinds for laboratory analysis for the same suite of parameters as the original samples (Tables 2 and 3).

To analyze the field sampling and laboratory testing reproducibility, the sample-duplicate pair was evaluated using the relative percentage difference (RPD) method, involving calculation of RPD when both sample and duplicate concentrations were greater than, or equal to, five times the laboratory reporting detection limit (RDL), as shown in Equation 1 below.

Equation 1:

$$\%\text{RPD} = \left(\left|\text{sample} - \text{duplicate concentrations}\right| \text{ divided by } \overline{X}\right) \text{ multiplied by } 100$$

Where $\overline{X}$ is the average concentration of a sample and its duplicate.

Surface water quality parameters were considered as having passed the quality assurance (QA)/quality control (QC) reproducibility procedure if the RPD was less than or equal to 20%, indicating a close correlation between the sample-duplicate pair. RPD is usually used for objectively flagging data for further review, rather than for taking corrective action.

RPD values were not calculated if one or both of the sample-duplicate concentrations were less than five times the RDL. In these cases, water quality parameters were still considered as having passed the QA/QC reproducibility procedure if the other sample duplicate concentration difference was less than one RDL value.

The RPD calculations are summarized in Table 2 (Duplicate 1) and Table 3 (Duplicate 2). All but four RPD tests satisfied the requirements (Two failing tests from each Duplicate). The QA/QC reproducibility guidelines were not satisfied for the following parameters:

- Duplicate 1: COD (36% RPD)
- Duplicate 2: COD (62% RPD) and TSS (33% RPD)

Small variations due to variability in field sampling or laboratory analytical methods (i.e., residuals from previous analysis, etc.) can result in concentration differences that are two or three times greater than the concentration result, which results in higher RPDs which fail the requirements. However, the concentrations are similar in most cases and often have acceptable variability even though the RPD calculation may indicate otherwise. The Duplicate RPD failures are limited in number (one or two out of 60 tests conducted for each duplicate). Based on this fact, a limited number of failed results is within acceptable variability, and the duplicate analysis indicates the data are stable and considered reliable overall.

3.0 REVIEW OF WATER WELLS IN SEARCH RADIUS

Tetra Tech completed an audit to verify and review the information contained within the EPA Water Well Information Database (WWID) and other publicly available information sources to determine the existence and status of groundwater wells within a 1.6 km radius of the Ryley facility, and to determine if it is warranted to field verify the wells and sample them as part of the Dugout and Water Well Sampling Program (beginning in 2023). The required search radius was 1.6 km; however, to account for the distance from the centre of the facility and spatial inaccuracies within the water well database, an expanded 2.0 km radius was used. The search showed records of 50 water well records drilled for various purposes as of September 2023.

The accuracy of the WWID is limited, as described by EPA - *"Data provided through [WWID] are preliminary in nature. This data may not have been reviewed or edited for accuracy and may be subject to significant change when reviewed or corrected. Please exercise caution and carefully consider the provisional nature of the information provided."* Further, EPA states that most well locations are not shown precisely enough to field verify. Where no GPS coordinates were provided in the driller submission forms (particularly for older wells), the well location is plotted in the centre of the LSD or quarter-section that was provided, and therefore, the WWID does not contain a high level of spatial accuracy.

Based on the available information, it appears that most wells are not suitable for regular sampling or are no longer present or available for use. Of 50 records returned, 44 are considered to not require field verification or are not suitable for sampling. Rationale for elimination is summarized in Table C below and encompasses 44 of the 50 wells. As a result, six (6) wells were included for site reconnaissance during the October 2023 field event.

Table C: Water Wells Eliminated from Search Radius

Type of Record or Use	Comments	Number of Wells
Decommissioned	WWID contains a record of well decommissioning.	4
Federal Well Survey	Non-domestic, assumed to be a test well, location unknown.	1
Transfer of land and removal of house	Well assumed to be abandoned/removed when land was sold, and house was removed.	3
Test hole, observation well, or monitoring well	Non-domestic observation well, assumed to be for compliance or other monitoring use based on owner name and/or proposed use.	21
Wells between 90 and 110 years old (pre-1933)	Well assumed to be decommissioned, abandoned, or not possible to locate in the field.	7
Distance Greater than 1.6 km	Wells were determined to be greater than 1.6 km from the edge of the landfill boundary (including the expansion area).	6
Municipal Use	The village of Ryley did not have any record of municipal water wells[2]. All Village water is provided by water line from the City of Edmonton.	2

[2] Email communication from Village of Ryley to Tetra Tech dated September 25, 2023.

Tetra Tech also reviewed the status of the three “observation/investigation” wells (on SE 10-50-17-W4M) located immediately south of the active Claystone Landfill cells and to the east of Highway 854. These “test holes” were part of the 44 excluded wells and were excluded from further review in the September 2023 response to EPA from Clean Harbors Canada Inc. that summarized the area wells to consider in the Annual Dugouts and Water Wells monitoring program. The rationale for exclusion of these three wells is summarized as follows.

“Observation/investigation” wells (test holes) Nos. 1888429, 1888430 and 1888439 are located on lands owned by Claystone immediately south of the existing Claystone Class II Landfill cells and were installed by C. E. Moell as part of the landfill expansion and operation plan at that site. They would be part of the monitoring program at that site if functional, and even if data were available, it would be difficult to interpret due to the close proximity and potential influence of the Claystone Facility (about 200 m to the north). By comparison, the Clean Harbors facility is about 800 m to the southwest of these water wells. In addition, the lands where these wells are located is planned for future cell development and wells will be decommissioned. Our justification for excluding these three wells in the annual Clean Harbor’s Dugout and Water Well monitoring program is they are part of the Claystone operations and monitoring program (if functional), they are much closer to Claystone Landfill operations, and they will soon be decommissioned (if not already decommissioned). Just as Claystone does not monitor wells or dugouts on Clean Harbor’s lands, we do not monitor or sample water wells/dugouts on the Claystone Landfill property.

The remaining six records have the potential to correspond to water wells located on residential property, and therefore, may constitute active water wells. These wells were assumed to be in service until proven otherwise and therefore, field reconnaissance was conducted on October 17, 2023, during the dugout monitoring event. Table D below provides a summary of available information on the remaining six wells and Tetra Tech’s findings during reconnaissance.

Table D: Field Verification of Water Wells

GIC ID	Date Completed	Location	Use	Tetra Tech Findings
94701	1986	WH 4-50-17 W4M	Domestic & Industrial	Currently a closed diner nearby which is listed as being for sale. There are two well stickups at the back of the building. A letter was dropped off requesting for more information. No reply received.
94710	Not stated	4-9-50-17 W4M	Domestic & Stock	The landowner (Terry Magneson) mentioned that there were three water wells surrounding his homestead and his family has decommissioned all three in the last 50 years. Currently, there are no water wells on his property.
94714	Not stated	SW 10-50-17 W4M	Domestic	The only potential residence in the vicinity is vacant/abandoned. GIC 94714 is likely an old record.
94748	Not stated	16-50-17 W4M	Domestic	The landowner stated that he has resided at the property for over 60 years and he doesn’t know of any water wells on the property.
286840	1997	4-10-50-17 W4M	Domestic	The only potential residence in the vicinity is vacant/abandoned. GIC ID 286840 is likely an old record.
94704	1986	4-50-17 W4M	Industrial	The building used to be occupied by “Highway 14 Regional Water Services Commission” and has since moved to a new location with the building currently appearing vacant. A well stickup was noted at an area adjacent to the west of the building. A letter requesting more information was dropped off at the vacant building and at the new office. No reply received.

None of the six outstanding water well records investigated resulted in monitoring or sampling as the well locations could not be confirmed/found or there was no response to either phone calls or letters dropped off at the locations.

4.0 FINDINGS

The chemical analysis results from the dugout monitoring program are reviewed for significant changes in parameters and compared to the range of results of previous sampling events, with particular focus on the past five years. The intent is not to compare results to provincial standards for acceptable water quality, but to pre-existing, baseline conditions in 1996 and successive years and identify potential or apparent trends, if any. High variability between years and between sites is possible and expected given only one sampling event per year and high variability in monthly and annual temperature and precipitation data. In addition, parameters at some locations have exceeded provincial water quality objectives since 1996 and are characteristic of natural conditions in the area or are related to pre-existing and ongoing agricultural land use. The objective of this work is to identify elevated levels and/or upward trends in parameters that might be sourced from the landfill through a groundwater, air or surface water pathway. Emphasis has been placed on reviewing sampling points down-gradient (generally east) of the landfill site, although the landfill site is near a local highpoint and groundwater and surface water flow may also be towards the north.

A summary of the 2023 data follows with data in Tables 1, 2 and 3. Table E below provides a summary of the evaluation of the parameters monitored for under the current approval.

Environment Canada's and Alberta Agriculture and Forestry's monthly and annual precipitation data from the Elk Island National Park meteorological station were reviewed and are summarized in Table 4. The total annual precipitation in 2023 was 396.7 mm which was 56.7 mm lower than the mean annual precipitation (or 87% of average) in the region (several different stations as available) since 1996. The months of January, February, March, September, October, November, and December 2023 were particularly low in 2023. The 2014, 2015, 2019, 2021, 2022, and 2023 annual precipitation data was from the Elk Island National Park meteorological station. Note that previous precipitation data (1996 to 2013) were obtained from the Tofield North Station when active. The Alberta Agriculture precipitation website[3] was updated to include more station data, so during 2016-2018, the Holden Alberta Government Drought Monitoring (AGDM) meteorological station data was utilized as it was closer to the subject site than others available. These shifts in the local reporting stations over the years are not expected to have a material impact on annual averages but may affect monthly precipitation data. Overall, there was generally lower than average precipitation in 2023 for a third consecutive year.

The two duplicate samples (Duplicate 1 from Dugout 11 and Duplicate 2 from Dugout 1) were tested for the same parameters as all other dugouts. All data is presented as follows:

The maximum value of each analyzed parameter were reviewed for each dugout location. The 2023 values of most parameters appeared similar to historical values. Parameters with 2023 analytical results greater than the historical values for specific dugouts are summarized in Table E. Data from dugouts 9A and 23 was not assessed as each of these locations commenced monitoring in 2023.

[3] http://www.agriculture.alberta.ca/acis/alberta-weather-data-viewer.jsp

Table E: Dugout and Water Well Monitoring Summary

Parameter	Locations where the 2023 value is the Maximum Value	Comments
pH (Field)	-	N/A
pH (Lab)	-	N/A
EC (Field)	-	N/A
EC (Lab)	Dugout 10	Lab EC at dugout 10 is the greatest to date, but similar to the 2022 value (2,810 µS/cm).
Chemical Oxygen Demand (COD)	Dugouts 3, 4, 10, and 20	COD results for dugouts 4 and 20 have exceeded historical values since 2022.
Dissolved Organic Carbon (DOC)	-	None
TDS	Dugout 10	TDS at dugout 10 appears to continue to increase year-over-year.
TSS	Dugouts 2, 3, 4, 10, 15, and 20	TSS monitoring commenced in 2021. While upward trends are apparent in several locations, the range of values observed may be within the typical range for the specified locations.
Dissolved Metals		
Aluminum	Dugout 11	No previous indication of elevated Aluminum at dugout 11.
Antimony	-	N/A
Arsenic	Dugout 10	Arsenic concentrations in dugout 10 appear to have increased slightly since 2019.
Barium	-	N/A
Boron	Dugout 9	Elevated but stable boron concentrations have been apparent since 2021.
Cadmium	Dugouts 4 and 11	Dugout 4 cadmium concentration is marginally greater than the laboratory detection limit. Dugout 11 cadmium concentration changed from the lowest observed value to the highest between 2022 and 2023.
Chromium, Total	-	N/A
Chromium, Hexavalent	No data available	No data available
Cobalt	-	N/A
Copper	Dugout 15	No previous trend in copper concentrations at dugout 15.
Lead	Dugouts 3 and15	Lead concentration at dugout 3 is not appreciably greater than the 2020 value. Lead concentration at dugout 15 is marginally greater than the laboratory detection limit.
Manganese	-	N/A
Mercury	-	N/A
Molybdenum	-	N/A
Nickel	-	N/A
Selenium	-	N/A
Silver	Dugout 11	Silver concentration at dugout 11 is marginally greater than the laboratory detection limit.
Thallium	-	N/A
Tin	Dugouts 3, 4, 10, 11, 13, 14, 19, 21, and 22	Tin concentrations at the specified locations are historically less than the laboratory detection limit.

Table E: Dugout and Water Well Monitoring Summary

Parameter	Locations where the 2023 value is the Maximum Value	Comments
Uranium	Dugout 10	Uranium concentration at dugout 10 has increased steadily since 2019.
Zinc	Dugout 15	Zinc concentration at dugout 15 continues to increase since 2022.
Major Ions		
Calcium	Dugout 10	Calcium concentration at dugout 10 continues to increase.
Magnesium	Dugouts 2, 4, 7, 10, 13, and 14	Magnesium concentrations at the indicated dugouts are substantially greater than during historical monitoring.
Potassium	Dugouts 19 and 22	Potassium concentrations at dugouts 19 and 22 do not appear to represent a recent increasing trend.
Sodium	Dugout 10	Sodium concentrations at dugout 10 have slowly increased since 2019.
Carbonate	-	N/A
Bicarbonate	Dugout 10	Bicarbonate concentration at dugout 10 does not appear to represent a recent increasing trend.
Chloride	Dugout 10	Chloride concentrations at dugout 10 have slowly increased since 2019.
Sulfate	Dugout 22	Sulfate concentrations at dugout 22 have increased substantially since 2019.
Nutrients		
Ammonia (as N)	Dugout 10	Ammonia as N concentration at dugout 10 has increased substantially since 2019.
Total Kjeldahl Nitrogen	Dugouts 3 and 10	TKN concentrations in dugouts 3 and 10 do not appear to represent a recent increasing trend.
Nitrate (as NO_3-N)	Dugout 3	
Nitrite (as NO_2-N)	Dugouts 3, 10, 11, and 13	
Phosphorus, Total	Dugouts 2, 3, 4, 5, 6, 7, and 10	Phosphorus concentrations in dugouts 2, 3, and 4 continue to increase over their 2022 values and may represent a potential increasing trend in these locations.
BTEX		
Benzene	-	N/A
Toluene	-	N/A
Ethylbenzene	-	N/A
Xylenes, Total	-	N/A
Phenols	-	N/A
PHC Fraction F1	-	N/A
PHC Fraction F2	-	N/A

N/A – Not Applicable. No 2023 locations showed the maximum value for the specified parameter.

Data charts for parameters with locations where the 2023 results were the greatest results on record are presented on Figure 2.

5.0 DISCUSSION

5.1 Dugout Monitoring

The dugout water levels in 2023 were similar to those observed in 2022. Photos 1 and 2 show typical water levels at dugouts 13 and 19, respectively, and photographs of each dugout were taken at the time of monitoring. Sufficient water was available for sampling at all dugouts in 2023, however landowner authorization to monitor and sample dugouts 24, 25, and 26 had not been received prior to the 2023 monitoring event. These dugout locations were not monitored or sampled in 2023 and they are new due the expanded facility boundary. They will be included in 2024 if possible.

In general, the values of most parameters at most dugouts analyzed in 2023 were similar to historical values, except as described below and in Section 4.0. The following discussion focuses on parameters or parameter groups where observations at select dugouts were at their historical highest values in 2023.

The laboratory EC and total dissolved solids values at dugout 10 reached a new maximum value in 2023. As EC is affected by the total amount of anions and cations in solution, and dugout 10 has new maximum values for almost all the major ions (see below), an unusually high EC could be expected in response. Chemical oxygen demand in four dugouts (dugouts 3, 4, 10, and 20) was at its highest value in 2023, suggesting that the organic constituents of those dugouts may be substantially greater than in previous years. Changes in dugout use by livestock, use of the surrounding farmland, or changes in seasonal presence of decaying organic matter could affect the COD observed in these locations. Dugouts 4 and 20 have recorded elevated COD since 2022 and should be closely observed during future events.

Total suspended solids were recorded at new maximum values for six dugouts in 2023. As TSS analysis was added in 2020, it is likely that the full range of TSS values for some or all of the monitored dugouts have not yet been established. Future monitoring events may confirm if these values are typical or represent a potential increasing trend. Total suspended solids can be affected by livestock activity, bank erosion and wind activity on the dugouts.

Various dissolved metals parameters (aluminum, arsenic, boron, cadmium, copper, lead, silver, tin, uranium, and zinc) were observed at new maximum concentrations in one or more dugouts in 2023. Most of these occurrences appear isolated compared to historical values and not consistent with generally increasing concentrations of the specified parameters at the indicated wells. Tin concentrations have historically been below the laboratory reportable detection limit (RDL) at most dugout locations; however, reportable values were recorded at some locations in 2023 and should be confirmed during future monitoring events.

All major ions except carbonate (calcium, magnesium, sodium, potassium, bicarbonate, chloride, and sulfate) were observed at new maximum concentrations in one or more dugouts in 2023. Calcium, magnesium, sodium, chloride, and sulfate values for the locations noted in Table E may indicated increasing trends of these parameters and should continue to be observed closely during future monitoring events.

Nutrient parameters (ammonia, TKN, nitrate, nitrite, and phosphorus) were all observed at new maximum values at select locations in 2023. Nutrient load in surface water bodies can change with seasonal factors or changes to surrounding land use such as the presence of livestock or application of fertilizers and highly varied results year over year do not necessarily indicate undue influence from nearby landfill operations.

No dugout locations were identified with new maximum BTEX, phenols, or PHC fraction F1 or F2 values in 2023. These parameters are typically indicators of potential contamination sources and are generally not detected above the laboratory RDL.

The assessment of parameters analyzed does not appear to indicate off-site impacts from the Ryley Class I landfill site to these dugouts through groundwater, surface water or air pathways within a 1.6 km radius study area which includes the 21 dugouts sampled in 2023.

5.2 Surrounding Area Water Well Review Summary

Tetra Tech completed an audit to verify and review the information contained within the EPA Water Well Information Database (WWID) and other publicly available information sources to determine the status of water wells within a 1.6 km radius of the Ryley facility. Based on the available information, it appears that most wells are not suitable for regular sampling or are no longer present or available for use. Of 50 records returned in the database, 44 are considered to not require field verification (nor are suitable for sampling). Rationale for elimination of the 44 wells included available well record details, age of installation, distance from the Ryley Facility, intended purpose and owner name.

As noted in Section 3.0, none of the six outstanding water well records investigated in the field resulted in monitoring or sampling as the well locations could not be confirmed/found or there was no response to either telephone calls or letters dropped off at the locations.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The following conclusions are based on the 2023 dugout and water well monitoring program:

- Analytical results of the dugout and water well monitoring program conducted in October 2023 indicate that the Ryley Class I Hazardous Waste Facility does not appear to be adversely impacting water quality in dugouts within a 1.6 km radius.
- Some parameters analyzed in 2023 exhibited new maximum observed values in one or more dugouts relative to historical baseline values, but the majority of concentrations were within the historical ranges for those parameters.
- Select parameters having historically high values or concentrations during the 2023 monitoring event should continue to be monitored and evaluated in future sampling events.
- No water wells were located within the 1.6 km radius of the site that could be included in the sampling program.
- A similar monitoring program is recommended for October 2024, as part of the ongoing site Approval compliance process.
- Each landowner should be forwarded a copy of the water chemistry analysis report pertaining to the dugout(s) sampled on their property once the 2023 report is finalized and submitted to AEPA.
- Area water wells should be reassessed every five years to confirm if any new wells have been established and should be included in the annual dugout and water well monitoring program.

7.0 CLOSURE

We trust this report meets your present requirements. Should you have any questions or comments, please contact the undersigned at your convenience.

Respectfully submitted,

APPENDIX A

REGULATORY APPROVAL - ALBERTA ENVIRONMENT AND PARKS EPEA APPROVAL NO.10348-03-01

Alberta Environment and Parks

AMENDING APPROVAL

PROVINCE OF ALBERTA

ENVIRONMENTAL PROTECTION AND ENHANCEMENT ACT
R.S.A. 2000, c.E-12, as amended.

APPROVAL NO. 10348-03-01

APPLICATION NO. 015-10348

EFFECTIVE DATE: June 21, 2022

EXPIRY DATE: March 31, 2027

APPROVAL HOLDER: Clean Harbors Canada, Inc.

Pursuant to Division 2, of Part 2, of the *Environmental Protection and Enhancement Act*, R.S.A.2000, c.E-12, as amended, the approval for the following activity:

> construction, operation and reclamation of Ryley Industrial Waste Management Facility, consisting of a Class I and Class II Industrial Landfill and a Hazardous Waste/Recyclable Storage and Processing Facility

is amended as per the attached terms and conditions.

Designated Director under the Act

Mohammad Habib, P. Eng.

Date Signed June 21, 2022

TERMS AND CONDITIONS ATTACHED TO APPROVAL

1. *Environmental Protection and Enhancement Act* Approval No. 10348-03-00 is hereby amended by this Amending Approval.

2. Parts 1, 2, 3, 4, 5, 6, 7 and 8 are deleted, and the following are substituted:

PART 1: DEFINITIONS

SECTION 1.1: DEFINITIONS

1.1.1 All definitions from the Act and the regulations apply except where expressly defined in this approval.

1.1.2 In all PARTS of this approval:

(a) "Act" means the *Environmental Protection and Enhancement Act*, R.S.A. 2000, c.E-12, as amended;

(b) “action leakage rate” means the leakage rate that would occur through the primary liner, based on two holes per hectare, each with a diameter of 2 mm and that is calculated to be 790L/ha/day;

(c) “active landfill area” means the portion of the landfill that has received or is receiving waste for disposal, where final cover has not been placed, and includes areas that are being used for interim management of waste prior to disposition;

(d) “active landfill life” means the period of landfill life during which waste is received for disposal at the landfill, beginning with the initial receipt of waste and ending with the start of final landfill closure activities;

(e) “AER” means Alberta Energy Regulator;

(f) “affected lands” means lands which have received substances released from the facility;

(g) “air effluent stream” means any substance in a gaseous medium released by or from a facility;

(h) “APEGA” means the Association of Professional Engineers and Geoscientists of Alberta;

(i) “application” means the written submissions from the approval holder to the Director in respect of application No. 014-10348 and any subsequent applications where amendments are issued for this approval;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(j) "application No. 005-10348" means the written submissions from the approval holder to the Director in respect of renewal application No. 005-10348;

(k) “application No. 008-10348” means the written submissions from the approval holder to the Director in respect of amendment application No. 008-10348;

(l) "application No. 012-10348" means the written submissions from the approval holder to the Director in respect of amendment application No. 012-10348;

(m) “as-built plans” means survey plans, signed and stamped by a professional registered with APEGA, that document variances from design or construction plans that were either approved or authorized according to the terms and conditions of this approval;

(n) “BTEX” means benzene, toluene, ethylbenzene and xylene;

(o) “CAO” means Chief Administrative Officer;

(p) “central waste receiving and stabilization area” means the central waste receiving and stabilization area as described in application No. 015-10348;

(q) “COD” means Chemical Oxygen Demand;

(r) “composite liner” means a liner that meets the specifications in 3.1.2(b) of this approval;

(s) "container" means any portable device in which a substance is kept, including but not limited to the following:

(i) drums, barrels and pails which have a capacity greater than 18 litres but less than 210 litres,

(ii) 320 litre overpack drums, and

(iii) 1000 litre tote tanks or sacks;

(t) “cover” means soil or other approved material that is used to cover compacted wastes in a landfill cell;

(u) “day”, when referring to sampling, means any sampling period of 24 consecutive hours;

(v) "decommissioning" means the dismantling and decontamination of the facility undertaken subsequent to the termination or abandonment of any

TERMS AND CONDITIONS ATTACHED TO APPROVAL

activity or any part of any activity regulated under the Act, excluding the landfill cells and those infrastructure components and facilities that are required for the landfill post-closure;

(w) "decontamination" means the treatment or removal of substances from the facility and affected lands;

(x) "Director" means an employee of the Government of Alberta designated as a Director under the Act;

(y) “dismantling” means the removal of buildings, structures, process and pollution abatement equipment, vessels, storage facilities, material handling facilities, railways, roadways, pipelines and any other installations that are being or have been used or held for or in connection with the facility;

(z) “DOC” means Dissolved Organic Carbon;

(aa) “domestic wastewater” means wastewater that is the composite of liquid and water-carried wastes associated with the use of water for drinking, cooking, cleaning, washing, hygiene, sanitation or other domestic purposes, together with any infiltration and inflow wastewater, that is released into a wastewater collection system;

(bb) “domestic wastewater system” means the parts of the facility that collect, store, or treat domestic wastewater from the facility;

(cc) "existing landfill cells" means Cell 1, Cell 2, Cell 3A, Cell 3B, and Cell 3C as described in application No. 005-10348;

(dd) “facility” means all buildings, structures, process and pollution abatement equipment, vessels, storage facilities, material handling facilities, roadways, railways, pipelines and other installations, the Class I and Class II industrial landfill and the HWRSP Facility, and includes the land, located on the SE ¼ and NE ¼ of Section 9, Township 50, Range 17, West of the 4th Meridian, that is being or has been used or held for or in connection with the Ryley Industrial Waste Management Facility;

(ee) “facility developed area” means the areas of the facility used for the storage, treatment, processing, transport, or handling of raw material, intermediate product, by-product, finished product, process chemicals, or waste material, and includes the active landfill area;

(ff) “final cover” means a designed system, natural or man-made, that is placed on the surface of a landfill or landfill cell that has reached its maximum designated waste elevation to control transmission of moisture and landfill gas, and conforms to the end use plan;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(gg) "final landfill closure" means the period of time when waste is no longer placed in the defined portion of a landfill and activities are undertaken to complete the final cover system and decommission components and facilities that are no longer required, and includes the construction of any additional components or monitoring systems that are necessary for post-closure;

(hh) "free liquids" means the liquids as determined by the US EPA SW-846 Test Method 9095B: Paint Filter Liquids Test, as specified in Test Methods for Evaluating Solid Waste: Physical/Chemical Methods, US EPA Publication No. SW-846, as amended;

(ii) "fugitive emissions" means emissions of substances to the atmosphere other than ozone depleting substances, originating from a facility source other than a flue, vent, or stack but does not include sources which may occur due to breaks or ruptures in process equipment;

(jj) "GCL" means geosynthetic clay liner that is made of a thin layer of bentonite either bonded to a geomembrane or fixed between two sheets of geotextile;

(kk) "geomembrane" means a sheet of manufactured synthetic material designed to control migration of liquid and gas;

(ll) "grab sample" means an individual sample collected in less than 30 minutes and which is representative of the substance sampled;

(mm) "groundwater" means groundwater as defined in the *Water Act,* R.S.A. 2000, c.W-3, as amended;

(nn) "groundwater monitoring well" means a well drilled at a site to measure groundwater levels and collect groundwater samples for the purpose of physical, chemical, or biological analysis to determine the concentration of groundwater constituents;

(oo) "H_2S" means hydrogen sulphide;

(pp) "HDPE" means High Density Polyethylene;

(qq) "HWRSP Facility" means the Hazardous Waste/Recyclable Storage and Processing Facility as described in the application for storage, processing and transfer of hazardous wastes and hazardous recyclables and which includes the Maintenance Shop, and is an integral part of the facility;

(rr) "hydraulic conductivity" means the ease with which water can be transported through a material;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(ss) "hydrocarbon" means a chemical compound that consists entirely of hydrogen and carbon;

(tt) "ISO/IEC 17025" means the international standard, developed and published by International Organization for Standardization (ISO), specifying management and technical requirements for laboratories;

(uu) "incompatible waste" means waste materials which could cause dangerous reactions from direct contact with one another;

(vv) "industrial wastewater" means the composite of liquid wastes and water-carried wastes, any portion of which results from any industrial process carried on at the HWRSP Facility;

(ww) "landfill" means the Class I and Class II industrial landfill as described in the application and which includes the waste receiving area(s) and waste stabilization area(s), and is an integral part of the facility;

(xx) "landfill cell" means a designed area of a landfill comprised of an excavation or earthen structure in which waste is enclosed;

(yy) "landfill cell closure" means the construction of a final cover for landfill cell including placement of previously conserved top soil and upper subsoil and re-vegetation as required for the intended future use of the landfill;

(zz) "landfill gas" means a mixture of gases generated by the microbial decomposition of and chemical reactions between wastes in a landfill;

(aaa) "lateral expansion" means an expansion of landfill cell boundaries beyond the approved area;

(bbb) "laydown area" means the laydown area as described in application No. 015-10348;

(ccc) "leachate" means a liquid that has been in contact with waste in the landfill cell and has undergone chemical or physical changes;

(ddd) "leachate collection system" means a system that gathers leachate so that it may be removed from a landfill, and includes a permeable drainage material, a network of perforated pipes and sumps or manholes from where leachate can be removed;

(eee) "leak detection liquid" means any liquid collected within the leak detection system;

(fff) "leak detection system" means a system that gathers liquid between a primary liner and a secondary liner system, and consists of a permeable

drainage material, a network of perforated pipes and sumps or manholes from where the liquid can be removed;

(ggg) "liner" means a continuous layer of synthetic material or compacted natural clay placed beneath and at the sides of a landfill cell that is compatible with the waste and restricts the migration of leachate, or landfill gas, or both;

(hhh) "local environmental authority" means the Department of Environment and Parks, in the Province of Alberta, or the agency that has the equivalent responsibilities for any jurisdiction outside the Province;

(iii) "major ions" means the following:

Calcium	Carbonate
Magnesium	Bicarbonate
Sodium	Chloride
Potassium	Sulfate

(jjj) "maximum acceptable leachate head" means the maximum depth of leachate above the lowest part of the primary liner, not including the sumps or leachate collection pipe trenches, and is:

(i) 1.0 m in each of the existing landfill cells, and

(ii) 0.3 m in each of the new landfill cells

during active landfill life, landfill cell closure, final landfill closure, and post-closure;

(kkk) "maximum designated waste elevation" means the maximum elevation of waste in metres above sea level that can be disposed of at the landfill prior to construction of final cover, and is 714 metres;

(lll) "metals" means the following:

Aluminum, dissolved	Chromium, dissolved (hexavalent)	Nickel, dissolved
Antimony, dissolved	Cobalt, dissolved	Selenium, dissolved
Arsenic, dissolved	Copper, dissolved	Silver, dissolved
Barium, dissolved	Lead, dissolved	Thallium, dissolved
Boron, dissolved	Manganese, dissolved	Tin, dissolved
Cadmium, dissolved	Mercury, total	Uranium, dissolved
Chromium, total	Molybdenum, dissolved	Zinc, dissolved

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(mmm) "monitoring system" means all equipment used for sampling, conditioning, analyzing or recording data in respect of any parameter listed or referred to in this approval, including equipment used for continuous monitoring;

(nnn) "month" means calendar month;

(ooo) “municipal solid waste” means solid waste resulting from or incidental to municipal, community, commercial, institutional and recreation activities, and includes garbage, rubbish, ashes, street cleanings, abandoned automobiles and all other solid wastes except hazardous waste, industrial solid waste, oilfield waste and biomedical wastes;

(ppp) “NAPS” means the National Air Pollution Surveillance program;

(qqq) "new landfill cells" means Cell 3D as described in application No. 005-10348, Cell 3E as described in application No. 012-10348, Cell 4 as described in application No. 014-10348, and Cell 5 as described in application No. 015-10348;

(rrr) "new surface water detention pond" means the surface water detention pond(s) as described in application No. 012-10348 or No. 015-10348;

(sss) “NORM” means Naturally Occurring Radioactive Materials;

(ttt) “NORM waste” means any waste material with concentrations of NORM above the limits specified in Tables 5.1, 5.2, or 5.3 of the *Canadian Guidelines for the Management of Naturally Occurring Radioactive Materials (NORM)*, Health Canada, 2011, as amended;

(uuu) “nutrients” means the following:

Ammonia nitrogen	Nitrite nitrogen
Total Kjeldahl nitrogen	Total phosphorus
Nitrate nitrogen	Dissolved phosphorus

(vvv) "old surface water detention pond" means the surface water detention pond as described in application No. 005-10348;

(www) “Petroleum Hydrocarbons Fractions F1 and F2” means the specific hydrocarbon fraction measured by the analytical methods described in the *Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil - Tier 1 Method,* published by the Canadian Council of Ministers of the Environment, 2001, as amended;

(xxx) “PM” means particulate matter;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(yyy) "PM_{10}" means particulate matter less than 10 microns in diameter;

(zzz) "points of compliance" means the location or locations of the groundwater monitoring wells where measurements of groundwater quality are taken to assess landfill and waste treatment performance;

(aaaa) "post-closure" means the period of time after completion of the final landfill closure;

(bbbb) "ppm" means concentration in parts per million;

(cccc) "primary liner" means the uppermost geomembrane liner;

(dddd) "QA/QC" means quality assurance and quality control;

(eeee) "quarter year" means a time period of three consecutive months designated as January, February and March; or April, May and June; or July, August and September; or October, November and December;

(ffff) "regulations" means the regulations enacted pursuant to the Act, as amended;

(gggg) "representative grab" means a sample consisting of equal volume portions of water collected from at least four sites between 0.20 to 0.30 metres below the water surface within a pond;

(hhhh) "runoff" means any rainwater or melt water that drains as surface flow from the facility developed areas, excluding leachate;

(iiii) "runoff control system" means the parts of the facility that collect, store or treat runoff from the facility, and includes but is not limited to runoff collection ditches, surface water detention ponds and tank farm bermed area;

(jjjj) "run-on" means any rainwater or melt water that drains as surface flow toward the active landfill area;

(kkkk) "run-on control system" means the parts of the facility that divert run-on away from the active landfill area;

(llll) "scrubber exhaust stack" means the exhaust stack through which the air effluent streams that are:

(i) collected from the exhaust vents of the Drum Processing Building or Staging Building or both, and

(ii) treated with the caustic scrubber and activated carbon filter

TERMS AND CONDITIONS ATTACHED TO APPROVAL

are released to the atmosphere as described in the application;

(mmmm) "secondary liner" means the lowermost geomembrane liner;

(nnnn) "soil" means mineral or organic earthen materials that can, have, or are being altered by weathering, biological processes, or human activity;

(oooo) "SOP" means Standard Operating Procedures;

(pppp) "storm event" means a 1 in 25 year, 24 hour duration rainfall event at Ryley, Alberta;

(qqqq) "tank" means a stationary device, designed to contain an accumulation of a substance, which is constructed primarily of non-earthen materials that provide structural support including wood, concrete, steel, and plastic;

(rrrr) "TDGR" means the *Transportation of Dangerous Goods Regulations* (SOR/2001-286) made under the *Transportation of Dangerous Goods Act*, 1992 (Canada), as amended;

(ssss) "TDS" means Total Dissolved Solids;

(tttt) "TNMOCs" means total non-methane organic compounds;

(uuuu) "topsoil" means the uppermost layer of soil and consists of:

(i) the A-horizons and all organic horizons as defined in *The Canadian System of Soil Classification* (Third Edition), Agriculture and Agri-Food Canada, Publication 1646, 1998, as amended, and

(ii) the soil ordinarily moved during tillage;

(vvvv) "total metals" means the following:

Antimony	Cobalt	Selenium
Arsenic	Copper	Silver
Barium	Iron	Thallium
Beryllium	Lead	Tin
Boron	Manganese	Uranium
Cadmium	Mercury	Vanadium
Chromium	Nickel	Zinc

(wwww) "TSP" means total suspended particulate matter;

(xxxx) "TSS" means Total Suspended Solids;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(yyyy) "upper subsoil" means the layer of soil directly below the topsoil layer that consists of the B-horizons as defined in *The Canadian System of Soil Classification,* (Third Edition), Agriculture and Agri-Food Canada, Publication 1646, 1998, as amended;

(zzzz) "VOCs" means volatile organic compounds;

(aaaaa) "volume estimate" means a technical evaluation based on the sources contributing to the release including but not limited to pump capabilities, water meters, and batch release volumes;

(bbbbb) "waste stabilization area" means the portion of the landfill that is used for waste stabilization or solidification or both, as described in application No. 008-10348 or No. 015-10348;

(ccccc) "waste storage area" means the areas designated for storage of containers for waste or hazardous recyclable or both, or for storage of tanks for waste or hazardous recyclable or both, or for storage of both, as described in application No. 005-10348;

(ddddd) "week" means any consecutive 7-day period;

(eeeee) "working face" means that portion of the active landfill area where waste is currently being deposited, spread and compacted; and

(fffff) "year" means calendar year.

PART 2: GENERAL

SECTION 2.1: REPORTING

2.1.1 The approval holder shall immediately report to the Director by telephone any contravention of the terms and conditions of this approval at 1-780-422-4505.

2.1.2 The approval holder shall submit a written report to the Director within 7 days of the reporting pursuant to 2.1.1.

2.1.3 The approval holder shall immediately notify the Director in writing if any of the following events occurs:

(a) the approval holder is served with a petition into bankruptcy;

(b) the approval holder files an assignment in bankruptcy or Notice of Intent to make a proposal;

(c) a receiver or receiver-manager is appointed;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(d) an application for protection from creditors is filed for the benefit of the approval holder under any creditor protection legislation; or

(e) any of the assets which are the subject matter of this approval are seized for any reason.

2.1.4 If the approval holder monitors for any substances or parameters which are the subject of operational limits as set out in this approval more frequently than is required and uses procedures authorized in this approval, then the approval holder shall provide the results of such monitoring as an addendum to the reports required by this approval.

2.1.5 The approval holder shall submit all monthly reports required by this approval to be compiled or submitted to the Director on or before the end of the month following the month in which the information was collected, unless otherwise specified in this approval.

2.1.6 The approval holder shall submit all annual reports required by this approval to be compiled or submitted to the Director on or before March 31 of the year following the year in which the information was collected, unless otherwise specified in this approval.

SECTION 2.2: RECORD KEEPING

2.2.1 The approval holder shall:

(a) record; and

(b) retain

all the following information in respect of any sampling conducted or analyses performed in accordance with this approval for a minimum of ten years, unless otherwise authorized in writing by the Director:

(i) the place, date and time of sampling,

(ii) sample type,

(iii) the dates the analyses were performed,

(iv) the analytical techniques, methods or procedures used in the analyses,

(v) the names of the persons who collected and analysed each sample, and

(vi) the results of the analyses.

2.2.2 The approval holder shall keep and maintain an Operating Record of the landfill as per 4.6.34(a) until the end of the landfill post-closure.

2.2.3 The Operating Record referred to in 2.2.2 shall include, at a minimum, all of the following information:

(a) the information required in section 7.3(c) of the *Standards for Landfills in Alberta*, as amended;

(b) the name and contact information of all persons who discover any contravention;

(c) the names and contact information of all persons who take any remedial actions arising from the contravention of the Act, the regulations, or this approval; and

(d) a description of the remedial measures taken in respect of a contravention of the Act, the regulations, or this approval.

2.2.4 The approval holder shall submit a copy of the most recent Operating Record to the Director upon written request from the Director within the timeline specified in writing by the Director.

SECTION 2.3: ANALYTICAL REQUIREMENTS

2.3.1 With respect to any sample required to be taken pursuant to this approval, the approval holder shall ensure that:

(a) collection;

(b) preservation;

(c) storage;

(d) handling; and

(e) analysis

shall be conducted in accordance with the following unless otherwise authorized in writing by the Director:

(i) for air:

(A) the *Alberta Stack Sampling Code*, Alberta Environment, 1995, as amended,

(B) the *Methods Manual for Chemical Analysis of Atmospheric Pollutants*, Alberta Environment, 1993, as amended, and

(C) the *Air Monitoring Directive*, Alberta Environment, 1989, as amended;

(ii) for industrial wastewater, industrial runoff, groundwater and domestic wastewater:

(A) the *Standard Methods for the Examination of Water and Wastewater*, published jointly by the American Public Health Association, American Water Works Association, and the Water Environment Federation, 1998, as amended;

(iii) for whole effluent toxicity tests:

(A) the *Biological Test Method: Reference Method for Determining Acute Lethality of Effluents to Rainbow Trout*, Environment Canada, Environmental Protection Series 1/RM/13, December 2000, as amended,

(B) the *Biological Test Method: Reference Method for Determining Acute Lethality of Effluents to Daphnia Magna*, Environment Canada, Environmental Protection Series 1/RM/14, December 2000, as amended,

(C) the *Biological Test Method: Growth Inhibition Test Using the Freshwater Alga Selenastrum capricornutum*, Environment Canada, Environmental Protection Series, November 1992, as amended,

(D) the *Biological Test Method: Test of Reproduction and Survival Using the Cladoceran Ceriodaphnia dubia*, Environment Canada, Environmental Protection Series 1/RM/21, February 1992, as amended,

(E) the *Biological Test Method: Test of Larval Growth and Survival Using Fathead Minnows*, Environment Canada, Environmental Protection Series 1/RM/22, February 1992, as amended, and

(F) the *Biological Test Method: Toxicity Test Using Luminescent Bacteria (Photobacterium phosphoreum)*, Environment Canada, Environmental Protection Series, 1/RM/24, November 1992, as amended;

(iv) for soil:

(A) the *Soil Monitoring Directive,* Alberta Environment, May 2009, as amended, and

(B) the *Soil Quality Criteria Relative to Disturbance and Reclamation*, Alberta Agriculture, March 1987, as amended; and

(v) for waste:

(A) the *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*, USEPA, SW-846, September 1986, as amended,

(B) the *Methods Manual for Chemical Analysis of Water and Wastes*, Alberta Environmental Centre, Vegreville, Alberta, 1996, AECV96-M1, as amended,

(C) the *Toxicity Characteristic Leaching Procedure (TCLP)* USEPA Regulation 40 CFR261, Appendix II, Method No. 1311, as amended, or

(D) the *Standard Methods for the Examination of Water and Wastewater*, American Public Health Association, American Water Works Association, and the Water Environment Federation, 2010, as amended.

2.3.2 The approval holder shall analyse all samples that are required to be obtained by this approval in a laboratory accredited pursuant to ISO/IEC 17025, as amended, for the specific parameter(s) to be analysed, unless otherwise authorized in writing by the Director.

2.3.3 The term sample used in 2.3.2 does not include samples directed to continuous monitoring equipment, unless specifically required in writing by the Director.

2.3.4 The approval holder shall comply with the terms and conditions of any written authorization issued by the Director under 2.3.2.

SECTION 2.4: OTHER

2.4.1 The terms and conditions of this approval are severable. If any term or condition of this approval or the application of any term or condition is held invalid, the application of such term or condition to other circumstances and the remainder of this approval shall not be affected thereby.

2.4.2 Any conflict between the *Standards for Landfills in Alberta*, as amended, and the terms and conditions of this approval shall be resolved in favour of this approval.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

2.4.3 *Environmental Protection and Enhancement Act* Approval No. 10348-02-00, as amended, is cancelled.

2.4.4 All tanks shall conform to the *Guidelines for Secondary Containment for Above Ground Storage Tanks,* Alberta Environmental Protection, 1997, as amended, unless otherwise authorized in writing by the Director.

2.4.5 All above ground storage tanks containing liquid hydrocarbons or organic compounds shall conform to the *Environmental Guidelines for Controlling Emissions of Volatile Organic Compounds from Aboveground Storage Tanks*, Canadian Council of Ministers of the Environment, PN 1180, 1995, as amended.

PART 3: CONSTRUCTION

SECTION 3.1: LANDFILL

3.1.1 The approval holder shall not commence construction of:

(a) Cell 4, unless and until updated financial security of the facility has been provided to the Director to include Cell 4; and

(b) Cell 5, unless and until updated financial security of the facility has been provided to the Director to include Cell 5.

3.1.2 The approval holder shall construct each new Class I industrial landfill cell in such a way that each new Class I landfill cell shall consist of the following components, at a minimum, unless otherwise authorized in writing by the Director:

(a) a minimum of 0.45 metre thick cover of clean sand or soil placed over top of the uppermost drainage layer;

(b) a composite liner that consists of, at a minimum:

(i) a geo-composite drainage layer placed in direct contact with an underlying 80 mil HDPE geomembrane liner as a primary liner;

(ii) a geo-composite drainage layer placed in direct contact with an underlying 80 mil HDPE geomembrane liner as a secondary liner; and

(iii) a GCL liner placed in direct contact with an underlying clay liner that has:

(A) a minimum thickness of 1.0 metre at all points, measured perpendicular to the slope, and

(B) been compacted to achieve an in-place hydraulic conductivity of 1×10^{-9} m/s or less;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(c) a leachate collection system that:

(i) is placed over the primary liner;

(ii) is capable of maintaining the maximum acceptable leachate head; and

(iii) consists of:

(A) a geo-composite drainage layer with a transmissivity of at least 1×10^{-4} m^2/s placed over top of the primary liner,

(B) a network of perforated leachate collection pipes, and

(C) a leachate collection sump placed over the primary liner;

(d) a leak detection system that:

(i) is installed over the secondary liner;

(ii) is capable of detecting the leakage through the primary liner; and

(iii) consists of:

(A) a geo-composite drainage layer with a transmissivity of at least 1×10^{-4} m^2/s placed over top of the secondary liner,

(B) a network of perforated leak detection liquid collection pipes, and

(C) a leak detection liquid collection sump placed over the secondary liner;

(e) a final cover:

(i) that meets the requirements in section 6.1(c) of the *Standards for Landfills in Alberta*, as amended; or

(ii) as specified in the Landfill Cell Closure Plan submitted by the approval holder and authorized in writing by the Director pursuant to 7.1.1 and 7.1.4;

(f) a run-on control system capable of preventing flow onto the active landfill area from at least the peak discharge from a 1 in 25 year, 24 hour duration storm event at the facility; and

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(g) a runoff control system capable of collecting and controlling at least the runoff volume resulting from a 1 in 25 year, 24 hour duration storm event at the facility.

3.1.3 For any new landfill cell(s) to be constructed below the native ground surface in the NE 09-050-17-W4M area of the facility, the approval holder shall construct the cell(s) in the following manner:

(a) shallow groundwater shall be dewatered and managed to ensure that construction specifications for the composite liner system referred to in 3.1.2 shall not be compromised;

(b) measures of groundwater dewatering and management during construction shall be documented, and the document shall be maintained as part of the documentation for construction of the composite liner system;

(c) the integrity of the composite liner system shall be verified and maintained to function as designed, and the verification shall be documented; and

(d) the documentation referred to in (b) and (c) above shall be submitted as part of the summary report required in 3.1.9.

3.1.4 The composite liner for the landfill shall be constructed on a foundation or base such that there shall be no failure of the liners due to settlement, compression, or uplift.

3.1.5 The approval holder shall submit to the Director the following plans and specifications for the proposed construction of each of the items listed in 3.1.2, signed and stamped by a professional registered with APEGA at least three (3) months prior to construction:

(a) a Detailed Construction Plan and Specifications prepared as per 3.1.2;

(b) a Construction Quality Assurance Plan; and

(c) a Construction Quality Control Plan.

3.1.6 If the Detailed Construction Plan and Specifications in 3.1.5 is found deficient by the Director, the approval holder shall correct all deficiencies as outlined in writing by the Director within the timeline specified in writing by the Director.

3.1.7 The approval holder shall implement the Detailed Construction Plan and Specifications in 3.1.5 as authorized in writing by the Director.

3.1.8 During construction of any of the items listed in 3.1.2, the approval holder shall not deviate from the Detailed Construction Plan and Specifications as authorized in writing by the Director in 3.1.7, unless the following conditions are met:

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(a) the deviation results in a minor adjustment to the Detailed Construction Plan and Specifications in order to suit field conditions encountered; and

(b) the deviation will result in an equivalent or better design performance of the landfill.

3.1.9 The approval holder shall submit to the Director a summary report of the Construction Quality Assurance and Construction Quality Control results signed and stamped by a professional registered with APEGA.

3.1.10 The summary report in 3.1.9 shall contain the following information, at a minimum:

(a) confirmation that the landfill has been constructed according to:

(i) the Construction Quality Assurance Plan,

(ii) the Construction Quality Control Plan, and

(iii) the Detailed Construction Plan and Specifications as authorized in writing by the Director in 3.1.7, subject to the deviations as per 3.1.8;

(b) description of any minor deviations as per 3.1.8;

(c) confirmation by the professional registered with APEGA, that deviations as per 3.1.8 will result in an equivalent or better design performance of the landfill;

(d) “as-built” plans;

(e) photo-documentation of important stages of construction including any repair work or remediation activities to establish or maintain liner integrity;

(f) documentation required in 3.1.3; and

(g) any other information as required in writing by the Director.

3.1.11 The approval holder shall notify the Director in writing at least fourteen (14) days prior to commencing operations of any new landfill cell.

3.1.12 The approval holder shall construct the new surface water detention pond(s) in the:

(a) SE 09-050-17-W4M area of the facility as described in application No. 012-10348; and

(b) NE 09-050-17-W4M area of the facility as described in application No. 015-10348 with a clay liner that has:

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(i) a minimum thickness of 1.0 metre at all points, measured perpendicular to the slope, and

(ii) been compacted to achieve an in-place hydraulic conductivity of 1 x 10^{-9} m/s or less;

unless otherwise authorized in writing by the Director.

3.1.13 The approval holder shall construct the laydown area in the NE 09-050-17-W4M area of the facility as described in application No. 015-10348, unless otherwise authorized in writing by the Director.

3.1.14 The approval holder shall manage landfill progression in such a manner as to minimize off-site visual impacts of the landfill, as described in the Landfill Cell Closure Plan submitted by the approval holder and authorized in writing by the Director pursuant to 7.1.1 and 7.1.4.

SECTION 3.2: WASTE RECEIVING AND STABILIZATION AREAS

3.2.1 The approval holder shall construct the waste receiving area(s) in the SE 09-050-17-W4M area of the facility as described in the application, unless otherwise authorized in writing by the Director.

3.2.2 The approval holder shall construct the waste stabilization area(s) in the SE 09-050-17-W4M area of the facility in accordance with the following:

(a) application No. 008-10348; and

(b) within a Class I landfill cell;

unless otherwise authorized in writing by the Director.

3.2.3 The approval holder shall construct the central waste receiving and stabilization area in the NE 09-050-17-W4M area of the facility as described in application No. 015-10348, unless otherwise authorized in writing by the Director.

3.2.4 The approval holder shall decommission and reclaim the waste receiving and stabilization area(s) in the SE 09-050-17-W4M area of the facility upon completing:

(a) construction; and

(b) commissioning

of the central waste receiving and stabilization area in the NE 09-050-17-W4M area of the facility, unless otherwise authorized in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

SECTION 3.3: SOIL CONSERVATION

3.3.1 The approval holder shall:

(a) salvage; and

(b) conserve

all topsoil for land reclamation of the landfill.

3.3.2 The approval holder shall:

(a) salvage; and

(b) conserve

all upper subsoil for land reclamation of the landfill.

3.3.3 The approval holder shall:

(a) conserve; and

(b) stockpile

all topsoil separately from the upper subsoil.

3.3.4 The approval holder shall place all:

(a) topsoil stockpiles; and

(b) upper subsoil stockpiles

at the landfill.

3.3.5 The approval holder shall stockpile all topsoil as follows:

(a) on stable foundations; and

(b) on undisturbed topsoil.

3.3.6 The approval holder shall stockpile all upper subsoil as follows:

(a) on stable foundations; and

(b) on areas where the topsoil has been removed.

3.3.7 The approval holder shall take all steps necessary to prevent any erosion (e.g., wind or water), including but not limited to, all of the following:

(a) revegetating the stockpiles; and

(b) any other steps authorized in writing by the Director.

3.3.8 The approval holder shall immediately suspend conservation of:

(a) topsoil; and

(b) upper subsoil

when:

(i) wet or frozen conditions will result in mixing, loss, degradation or compaction of topsoil or upper subsoil, or

(ii) high wind velocities, any other field conditions or facility operations will result in mixing, loss, or degradation of topsoil or upper subsoil.

3.3.9 The approval holder shall recommence conservation of:

(a) topsoil; and

(b) upper subsoil

only when conditions in 3.3.8 no longer exist.

PART 4: OPERATIONS, LIMITS, MONITORING AND REPORTING

SECTION 4.1: GENERAL

4.1.1 The approval holder shall maintain the geographical boundaries of the facility to that located within SE ¼ and NE ¼ of Section 09, Township 050, Range 17, West of the 4th Meridian, as described in the application.

4.1.2 The approval holder shall limit the waste elevation of the landfill to no more than the maximum designated waste elevation.

4.1.3 The approval holder shall restrict access to the facility to only personnel authorized by the approval holder.

4.1.4 The approval holder shall maintain a publicly available 24 hour "HOTLINE" number for a prompt response during an emergency.

4.1.5 The approval holder shall:

(a) operate; and

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(b) maintain the integrity of

the following waste management facilities at the facility:

(i) the HWRSP Facility;

(ii) the Class I and Class II industrial landfill, including:

(A) Class I landfill cells,

(B) Class II landfill cell(s),

(C) waste receiving area(s), and

(D) waste stabilization area(s); and

(iii) waste storage area(s);

as described in the application.

4.1.6 In addition to 4.1.5, the approval holder shall:

(a) operate; and

(b) maintain the integrity of

the following infrastructure components at the facility:

(i) the composite liner;

(ii) the leachate collection system,

(iii) the leak detection system,

(iv) the run-on control system,

(v) the runoff control system,

(vi) the groundwater monitoring wells,

(vii) the weigh scale, and

(viii) the site access control;

as described in the application.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

FACILITY AUDIT

4.1.7 The approval holder shall cause the facility to be audited by an independent third-party environmental consultant or organization to assess compliance with the terms and conditions of this approval:

(a) at least once every three years; and

(b) commencing on or before October 1, 2018 for the first audit.

4.1.8 The approval holder shall submit the audit report required in 4.1.7 in the Annual Landfill Operations Report as required in 4.6.60(c).

4.1.9 The requirements in 4.1.7 and 4.1.8 shall not relieve the approval holder of any duty under the Act, or its associated regulations, or this approval.

FACILITY WILDLIFE MANAGEMENT PLAN

4.1.10 The approval holder shall:

(a) develop; and

(b) implement

a Facility Wildlife Management Plan at the facility to keep wildlife away from exposed waste areas within 120 days of the issuance of this approval, unless otherwise authorized in writing by the Director.

4.1.11 The approval holder shall:

(a) review the Facility Wildlife Management Plan annually; and

(b) update the Facility Wildlife Management Plan if any of the following circumstances apply:

(i) there are facility expansions or changes in site operations, or

(ii) an update is requested in writing by the Director.

4.1.12 The approval holder shall retain a copy of the most recent Facility Wildlife Management Plan at the facility.

4.1.13 The approval holder shall submit a copy of the most recent Facility Wildlife Management Plan to the Director upon written request from the Director within the timeline specified in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.1.14 If the Facility Wildlife Management Plan submitted pursuant to 4.1.13 is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

4.1.15 The approval hold shall implement the latest Facility Wildlife Management Plan, unless otherwise authorized in writing by the Director.

COMMUNITY COMPLAINT RESPONSE PLAN

4.1.16 The approval holder shall:

(a) develop; and

(b) implement

a Community Complaint Response Plan at the facility within 90 days of the issuance of this approval, unless otherwise authorized in writing by the Director.

4.1.17 The approval holder shall include, at a minimum, all of the following in the Community Complaint Response Plan referred to in 4.1.16:

(a) procedures and methods to be taken to respond to the complaint, which shall include but not limited to the following:

(i) recording of the complaint,

(ii) reviewing of the complaint records and other relevant information,

(iii) investigation of the complaint, and

(iv) timeline and follow-up actions for responding to the complaint based on the findings of the complaint review and investigation;

(b) the recording of the complaint referred to in (a)(i) above shall include but not limited to the following:

(i) contact information of the complainant(s) (names, phone numbers, e-mails and addresses),

(ii) detailed description of the event for which the complaint is filed,

(iii) date and time of the event occurring,

(iv) location where the event is noticed, and direction and distance of the event location relative to the facility,

(v) wind direction and speed at the facility, and

(vi) other local meteorological information at the time of the event occurring;

(c) the reviewing of the complaint referred to in (a)(ii) above shall include but not limited to the following:

(i) reviewing complaint records,

(ii) reviewing the facility operating records,

(iii) reviewing additional local meteorological data, and

(iv) timeline for reviewing the complaint;

(d) the investigation of the complaint referred to in (a)(iii) above shall include but not limited to the following:

(i) meeting complainant(s) to obtain further information related to the complaint,

(ii) visiting other local residents to collect additional information,

(iii) assessing other activities in the vicinity of the facility that may have potential for causing the event, and

(iv) timeline for the complaint investigation;

(e) the timeline and follow-up actions referred to in (a)(iv) above shall include but not limited to the following:

(i) timeline for responding to the complaint; and

(ii) follow-up actions:

(A) if the complaint is found to be related to the facility operations, the follow-up actions shall include:

(A.1) notifying the complainant(s) of the findings of the complaint review and investigation within the timeline specified in (i) above,

(A.2) taking immediate measures to correct the source(s) of the compliant,

(A.3) taking measures to prevent the issue from occurring again in future, and

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(A.4) providing a summary of the complaint review and investigation in the Annual Landfill Operations Report pursuant to 4.6.60(n); or

(B) if the complaint is found not to be related to the facility operations, the follow-up actions shall include:

(B.1) notifying the complainant(s) of the findings of the complaint review and investigation within the timeline specified in (i) above, and

(B.2) providing a summary of the complaint review and investigation in the Annual Landfill Operations Report pursuant to 4.6.60(n).

4.1.18 The approval holder shall:

(a) review the Community Complaint Response Plan annually; and

(b) update the Community Complaint Response Plan if any of the following circumstances apply:

(i) there are facility expansions or changes in site operations, or

(ii) an update is requested in writing by the Director.

4.1.19 The approval holder shall retain a copy of the most recent Community Complaint Response Plan at the facility.

4.1.20 The approval holder shall submit a copy of the most recent Community Complaint Response Plan to the Director upon written request from the Director within the timeline specified in writing by the Director.

4.1.21 If the Community Complaint Response Plan submitted pursuant to 4.1.20 is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

4.1.22 The approval hold shall implement the latest Community Complaint Response Plan, unless otherwise authorized in writing by the Director.

PARTICIPATION IN DEVELOPMENT OF LOCAL EMERGENCY MANAGEMENT PLANS

4.1.23 The approval holder shall support the Village of Ryley and Beaver County in the development of Local Emergency Management Plans by providing assistance to the Village and County in, at a minimum, all of the following:

(a) identifying hazards at the facility;

(b) assessing degree of risk of the hazards at the facility;

(c) suggesting risk mitigation measures;

(d) offering input to development of emergency notification and emergency evacuation procedures for local residents;

(e) keeping the Village and County updated for any major new development at the facility; and

(f) advising the Village and County of the need for updating the Local Emergency Management Plans following any major new development at the facility.

FACILITY EMERGENCY MANAGEMENT PLAN

4.1.24 The approval holder shall:

(a) develop; and

(b) implement

a Facility Emergency Management Plan at the facility within 90 days of the issuance of this approval, unless otherwise authorized in writing by the Director.

4.1.25 The Facility Emergency Management Plan referred to in 4.1.24 shall include, at a minimum, all of the following:

(a) identification of hazards at the facility;

(b) assessment of degree of risk and impact of hazards at the facility;

(c) preventative measures for hazards at the facility;

(d) mitigation measures for hazards at the facility;

(e) emergency preparedness at the facility;

(f) procedures for emergency management at the facility; and

(g) emergency notification and emergency evacuation procedures for local residents.

4.1.26 The approval holder shall:

(a) review the Facility Emergency Management Plan annually; and

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(b) update the Facility Emergency Management Plan if any of the following circumstances apply:

(i) there are facility expansions or changes in site operations, or

(ii) an update is requested in writing by the Director.

4.1.27 The approval holder shall retain a copy of the most recent Facility Emergency Management Plan at the facility.

4.1.28 The approval holder shall submit a copy of the most recent Facility Emergency Management Plan to the Director upon written request from the Director within the timeline specified in writing by the Director.

4.1.29 If the Facility Emergency Management Plan submitted pursuant to 4.1.28 is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

4.1.30 The approval hold shall implement the latest Facility Emergency Management Plan, unless otherwise authorized in writing by the Director.

COMMUNITY ACCESIBLE WEBSITE

4.1.31 The approval shall:

(a) develop; and

(b) maintain

a community accessible website available to all local residents within 120 days of the issuance of this approval, unless otherwise authorized in writing by the Director.

4.1.32 The community accessible website referred to in 4.1.31 shall include, at a minimum, all of the following information:

(a) Annual Landfill Operations Reports (including the three-year compliance audit report, Annual Dugout and Water Well Sampling Program Report, and Annual Landfill Cell Closure Report, etc.);

(b) Monthly Waste Management Report, and Annual Waste Management Summary Report;

(c) Monthly Ambient Air Monitoring Report, and Annual Ambient Air Monitoring Report;

(d) Monthly Runoff and Industrial Wastewater Report, and Annual Runoff and Industrial Wastewater Report;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(e) Annual Groundwater Monitoring Program Report;

(f) Soil Monitoring Program Report, and Soil Management Program Report;

(g) Facility Wildlife Management Plan;

(h) Community Complaint Response Plan;

(i) regulatory correspondences for incidents and complaints;

(j) correspondences made to Alberta Environment and Parks and copied CAOs at the Village of Ryley and Beaver County;

(k) Facility Emergency Management Plan, including emergency notification and emergency evacuation procedures;

(l) Village of Ryley Emergency Management Plan, including emergency notification and emergency evacuation procedures;

(m) Beaver County Emergency Management Plan, including emergency notification and emergency evacuation procedures; and

(n) any other information as requested in writing by the Director.

4.1.33 The approval holder shall:

(a) review the community accessible website annually; and

(b) update the website if any of the following circumstances apply:

(i) there are facility expansions or changes in site operations, or

(ii) an update is requested in writing by the Director.

SECTION 4.2: AIR

OPERATIONS

4.2.1 The approval holder shall not release any air effluent streams to the atmosphere except as authorized by this approval.

4.2.2 The approval holder shall only release air effluent streams to the atmosphere from the following sources:

(a) the scrubber exhaust stack;

(b) the Drum Processing Building natural gas fired air make up unit exhaust vent;

(c) the Staging Building natural gas fired air make up unit exhaust vent;

(d) the Administration Building natural gas fired furnaces exhaust vents;

(e) the Laboratory fume hood and natural gas fired air make up unit exhaust vents;

(f) the Maintenance Shop equipment and natural gas fired Radiant Heater exhaust vents;

(g) the Leachate Collection Tanks natural gas fired heaters exhaust vents;

(h) the leachate transfer lines passive gas vents; and

(i) any other source authorized in writing by the Director.

4.2.3 The approval holder shall not operate any process equipment unless and until the pollution abatement equipment associated with the corresponding process equipment is:

(a) operational; and

(b) operating.

4.2.4 The approval holder shall treat all air effluent streams from the exhaust vents of the Drum Processing or Staging or both Buildings with a caustic scrubber and an activated carbon filter before directing the air effluent streams to the scrubber exhaust stack for release to the atmosphere while:

(a) hazardous waste or hazardous recyclables or both are being processed;

(b) hazardous waste or hazardous recyclables or both are being transferred; or

(c) containers of hazardous waste or hazardous recyclables or both are open

in the Drum Processing or Staging or both Buildings.

4.2.5 The approval holder shall control fugitive emissions and any source not specified in 4.2.2 in accordance with 4.2.6 of this approval unless otherwise authorized in writing by the Director.

4.2.6 With respect to fugitive emissions and any source not specified in 4.2.2, the approval holder shall not release a substance or cause to be released a substance that causes or may cause any of the following:

(a) impairment, degradation or alteration of the quality of natural resources;

(b) material discomfort, harm or adverse effect to the well being or health of a person; or

(c) harm to property or to vegetative or animal life.

4.2.7 The approval holder shall not burn any debris by means of an open fire unless authorized in writing by the Director.

4.2.8 If the approval holder receives complaints of offensive odours, or fugitive dust, or both, beyond the facility boundaries, the approval holder shall:

(a) conduct the following to reduce the release of those odours, or fugitive dust, or both by:

(i) placing restrictions on types, or volumes, or both, of the wastes being handled or processed or deposited that are causing those odours, or fugitive dust, or both,

(ii) increasing the frequency of cover placement, or modifying waste handling activities, or performing both, at the landfill,

(iii) modifying waste handling activities at the HWRSP Facility, or

(iv) performing any combination of the above; and

(b) activate the Odour and Fugitive Dust Response Program as specified in the Landfill Operations Plan in 4.6.34(l).

LIMITS

4.2.9 The approval holder shall maintain the pH of the scrubbing liquid of the caustic scrubber referred to in 4.2.4 at 8.0 or higher.

4.2.10 The approval holder shall replace activated carbon in the activated carbon filter referred to in 4.2.4 immediately when the concentration of total petroleum hydrocarbons in the air effluent streams released from the scrubber exhaust stack to the atmosphere exceeds 25 ppm.

SOURCE MONITORING AND REPORTING

4.2.11 The approval holder shall monitor, daily at a minimum, the pH of the scrubbing liquid of the caustic scrubber referred to in 4.2.4.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.2.12 The approval holder shall monitor, weekly at a minimum, the air effluent streams released from the scrubber exhaust stack, using a portable total petroleum hydrocarbon analyzer while:

(a) hazardous waste or hazardous recyclables or both are being processed;

(b) hazardous waste or hazardous recyclables or both are being transferred; or

(c) containers of hazardous waste or hazardous recyclables or both are open

in the Drum Processing or Staging or both Buildings.

4.2.13 The portable total petroleum hydrocarbon analyzer referred to in 4.2.12 shall:

(a) have a detection limit of 1 ppm or lower for total petroleum hydrocarbons;

(b) be located in a straight section of the scrubber exhaust stack, a minimum of one (1) metre downstream from the last flow disturbance; and

(c) be calibrated regularly in accordance with the analyzer manufacturer's specifications.

AMBIENT AIR MONITORING AND REPORTING

4.2.14 The approval holder shall continue to implement the Ambient Air Monitoring Program as authorized in writing by the Director on June 24, 2009, unless and until otherwise authorized in writing by the Director pursuant to 4.2.21.

4.2.15 The approval holder shall submit to the Director the results of the Ambient Air Monitoring Program in 4.2.14 with the following reports:

(a) a Monthly Ambient Air Monitoring Report; and

(b) an Annual Ambient Air Monitoring Report

in accordance with the written authorization by the Director on June 24, 2009, unless and until otherwise authorized in writing by the Director pursuant to 4.2.21.

4.2.16 The approval holder shall submit:

(a) a revised Ambient Air Monitoring Program;

(b) revised reporting requirements, or

(c) both of the above

to the Director upon written request from the Director within the timeline specified in writing by the Director.

4.2.17 The approval holder shall submit an enhanced Ambient Air Quality Monitoring Program to the Director within 90 days of the issuance of this approval, unless otherwise authorized in writing by the Director.

4.2.18 The approval holder shall include, at a minimum, all of the following in the enhanced Ambient Air Quality Monitoring Program referred to in 4.2.17:

(a) three (3) intermittent ambient air quality monitoring stations:

(i) the existing Highway 854 station,

(ii) the existing Ryley School station, and

(iii) the existing Facility Site station, to be relocated as authorized in writing by the Director;

(b) the following monitoring parameters for the existing Highway 854 station:

(i) TSP,

(ii) PM_{10} (for 2 year transition from PM_{10} to TSP, starting from authorization of the enhanced Ambient Air Quality Monitoring Program by the Director),

(iii) total metals in:

(A) TSP, and

(B) PM_{10} (for 2 year transition from PM_{10} to TSP, starting from authorization of the enhanced Ambient Air Quality Monitoring Program by the Director),

if concentration of TSP or PM_{10} exceeds 50 $\mu g/m^3$,

(iv) VOCs, and

(v) TNMOCs;

(c) the following monitoring parameters for the Ryley School and Facility Site stations:

(i) TSP, and

(ii) total metals in TSP, if concentration of TSP exceeds 50 $\mu g/m^3$; and

(d) the following monitoring frequencies for the three (3) stations referred to in (a) above:

(i) for the Highway 854 station, once every six (6) days in alignment with the NAPS sampling schedule, and

(ii) for the Ryley School and Facility Site stations, linking the two (2) stations in such a way that the two (2) stations will collect air samples whenever the wind direction is oriented in a northeast to southwest direction.

4.2.19 The approval holder shall include a minimum of one (1) meteorological station in each of the Ryley School and Facility Site intermittent ambient air quality monitoring stations referred to in 4.2.18(a) that measures and records, at a minimum, all of the following parameters:

(a) wind speed; and

(b) wind direction.

4.2.20 If the revised:

(a) Ambient Air Monitoring Program;

(b) reporting requirements; or

(c) both of the above

submitted pursuant to 4.2.16 or 4.2.17 is found deficient by the Director, the approval holder shall correct all deficiencies as outlined in writing by the Director within the timeline specified in writing by the Director.

4.2.21 The approval holder shall implement the revised:

(a) Ambient Air Monitoring Program;

(b) reporting requirements; or

(c) both of the above

submitted pursuant to 4.2.16 or 4.2.17 as authorized in writing by the Director within the timeline specified in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

SECTION 4.3: RUNOFF AND INDUSTRIAL WASTEWATER

OPERATIONS

4.3.1 The approval holder shall not release any substances from the facility to the surrounding watershed except as authorized by this approval.

4.3.2 The approval holder shall operate and maintain the integrity of:

(a) the run-on control system to prevent flow onto the active landfill area from at least the peak discharge from a 1 in 25 year, 24 hour duration storm event at the facility; and

(b) the runoff control system for the facility to collect and control at least the runoff volume resulting from a 1 in 25 year, 24 hour duration storm event at the facility.

4.3.3 All runoff from the facility developed area shall be directed to the runoff control system as described in:

(a) application No. 012-10348, for the SE 09-050-17-W4M area of the facility, prior to decommissioning and reclamation of the old surface water detention pond;

(b) application No. 014-10348, for the SE 09-050-17-W4M area of the facility, after decommissioning and reclamation of the old surface water detention pond; and

(c) application No. 015-10348, for the NE 09-050-17-W4M area of the facility;

unless otherwise authorized in writing by the Director.

4.3.4 Prior to decommissioning and reclamation of the old surface water detention pond and subject to 4.3.8, the approval holder shall only make or permit a release from the old surface water detention pond:

(a) at the release point as designated in application No. 012-10348, which is:

(i) located in the south east corner of the old surface water detention pond, and

(ii) referred to as sampling location A1 in 4.3.12; and

(b) through

(i) a pump and a release hose over the south berm into the drainage control ditch, east of the landfill access road, to the new surface water

detention pond in the SE 09-050-17-W4M area of the facility, under normal operating conditions; or

(ii) a pump and a release hose over the south berm directly to the culvert under Highway 854, during periods of high runoff exceeding the holding capacity of the new surface water detention pond in the SE 09-050-17-W4M area of the facility;

unless otherwise authorized in writing by the Director.

4.3.5 Subject to 4.3.8, the approval holder shall only make or permit a release from the new surface water detention pond in the SE 09-050-17-W4M area of the facility:

(a) at the release point as designated in application No. 012-10348, which is:

(i) located in the north east corner of the new surface water detention pond in the SE 09-050-17-W4M area of the facility, and

(ii) referred to as sampling location B1 in 4.3.12; and

(b) through a pump and a release hose over the east berm into the culvert under Highway 854;

unless otherwise authorized in writing by the Director.

4.3.6 Subject to 4.3.8, the approval holder shall only make or permit a release from each of the new surface water detention pond(s) in the NE 09-050-17-W4M area of the facility:

(a) through a pump and a release hose into the drainage control ditch, east of the landfill access road, to the new surface water detention pond in the SE 09-050-17-W4M area of the facility, under normal operating conditions; or

(b) through a pump and a release hose directly to the culvert under Highway 854, during periods of high runoff exceeding the holding capacity of the new surface water detention pond in the SE 09-050-17-W4M area of the facility;

unless otherwise authorized in writing by the Director.

4.3.7 The approval holder shall only dispose of industrial wastewaters, or specified runoff in TABLE 4.3-A, or both, by one or more of the following methods:

(a) to facilities holding a current Act authorization to accept such waste;

(b) to facilities approved by a local environmental authority outside of Alberta to accept such waste;

(c) to a disposal well approved by AER;

(d) as per 4.6.52; or

(e) as otherwise authorized in writing by the Director.

TABLE 4.3-A: SPECIFIED RUNOFF

SOURCES
Runoff that exceeds any of the limits for the parameters listed in TABLE 4.3-B.
Runoff for which the results of the parameters listed in TABLE 4.3-B are unavailable at the time that the runoff must be disposed of.
Runoff from within the tank farm bermed area.

LIMITS

4.3.8 Releases of runoff:

(a) from the old surface water detention pond to the surrounding watershed;

(b) from the new surface water detention pond in the SE 09-050-17-W4M area of the facility to the surrounding watershed;

(c) from each of the new surface water detention pond(s) in the NE 09-050-17-W4M area of the facility to the surrounding watershed, or to the new surface water detention pond in the SE 09-050-17-W4M area of the facility; or

(d) from any combination of the above

shall comply with the limits specified in TABLE 4.3-B.

TABLE 4.3-B: RUNOFF LIMITS FOR SURFACE WATER DETENTION PONDS

PARAMETER	LIMITS (Maximum unless otherwise indicated)
pH	6.0 – 9.5 pH units
COD	50 mg/L
TDS	2500 mg/L
TSS	25 mg/L
Ammonia (expressed as Nitrogen)	5 mg/L
Chloride	250 mg/L
Sodium	200 mg/L
Sulphate	500 mg/L
Oil or other substances	Not present in amounts sufficient to create a visible film or sheen
96-Hour Multiple Concentration Acute Lethality Test Using Rainbow Trout (*Oncorhynchus mykiss*)	50% or greater survival

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.3.9 Releases of runoff from within the tank farm bermed area to the old or new or both surface water detention ponds shall comply with the limits specified in TABLE 4.3-C.

TABLE 4.3-C: RUNOFF LIMITS FOR TANK FARM BERMED AREA

PARAMETER	LIMITS Maximum unless otherwise indicated
pH	6.0 – 9.5 pH units
COD	50 mg/L
TSS	25 mg/L
Ammonia (expressed as Nitrogen)	5 mg/L
Oil or other substances	Not present in amounts sufficient to create a visible film or sheen

MONITORING AND REPORTING

4.3.10 The approval holder shall monitor the runoff control system as required in TABLE 4.3-D, subject to 4.3.13.

4.3.11 The approval holder shall report to the Director the results of the runoff control system monitoring as required in TABLE 4.3-D, subject to 4.3.13.

4.3.12 For the purpose of TABLE 4.3-D:

(a) sampling location A1 is defined as the old surface water detention pond release point;

(b) sampling location A2 is defined as the old surface water detention pond;

(c) sampling location B1 is defined as the release point of the new surface water detention pond in the SE 09-050-17-W4M area of the facility;

(d) sampling location B2 is defined as the new surface water detention pond in the SE 09-050-17-W4M area of the facility;

(e) sampling location C1 is defined as the release point of each of the new surface water detention pond(s) in the NE 09-050-17-W4M area of the facility;

(f) sampling location C2 is defined as each of the new surface water detention pond(s) in the NE 09-050-17-W4M area of the facility; and

(g) sampling location D is defined as the tank farm bermed area.

4.3.13 The monitoring and reporting requirements in 4.3.10 and 4.3.11 for the old surface water detention pond (sampling locations A1 and A2) shall not apply after decommissioning and reclamation of the old surface water detention pond.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

TABLE 4.3-D: RUNOFF CONTROL SYSTEM MONITORING AND REPORTING

MONITORING				REPORTING	
Parameter	**Frequency**	**Sample Type**	**Sampling Location**	**Monthly**	**Annually**
Surface Water Detention Ponds				Monthly Runoff and Industrial Wastewater Report, for each month when release occurs	Annual Runoff and Industrial Wastewater Report
Flow (m^3/day)	Daily during release	Estimate	A1, B1, C1		
pH	Once per batch release, prior to release	Representative Grab	A2, B2, C2		
COD					
TDS					
TSS					
Ammonia (expressed as nitrogen)					
Chloride					
Sodium					
Sulphate					
Oil or other substances	Daily during release	Visual			
96-hour multiple concentration acute lethality test using rainbow trout (*oncorhynchus mykiss*)	Each month when release occurs, prior to release, for the first batch release of the month	Representative Grab			
48-hour static acute lethality test using *daphnia magna*					
Tank Farm Bermed Area					
Volume (m^3)	Total batch volume released	Estimate	D		
pH	Once per batch release, prior to release to the surface water detention pond(s)	Representative Grab			
COD					
TSS					
Ammonia (expressed as nitrogen)					
Oil or other substances		Visual			

4.3.14 The monitoring and reporting required in TABLE 4.3-D for the acute lethality tests shall comply with:

(a) the *Biological Test Method: Reference Method for Determining Acute Lethality of Effluents to Rainbow Trout*, Environment Canada, Environmental Protection Series 1/RM/13, December2000, as amended; and

(b) the *Biological Test Method: Reference Method for Determining Acute Lethality of Effluents to Daphnia Magna*, Environment Canada, Environmental Protection Series 1/RM/14, December 2000, as amended.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.3.15 The approval holder shall:

(a) treat any acute lethality test that deviates from the corresponding test method referred to in 4.3.14 as invalid; and

(b) repeat the test as soon as logistically possible.

4.3.16 In the event that less than 50% of the rainbow trout survived in the 100% concentration sample, the approval holder shall:

(a) implement a program immediately to identify the source of the toxicity; and

(b) submit to the Director within 90 days after the test result is available, a proposed program to reduce the toxicity of the runoff.

4.3.17 The approval holder shall submit the Monthly Runoff and Industrial Wastewater Report in TABLE 4.3-D to the Director.

4.3.18 The Monthly Runoff and Industrial Wastewater Report shall include, at a minimum, all of the following information:

(a) a monthly assessment of the monitoring results relative to the limits in TABLE 4.3-B;

(b) a monthly assessment of the monitoring results relative to the limits in TABLE 4.3-C;

(c) a monthly assessment of the performance of the:

(i) runoff control system,

(ii) pollution abatement equipment, and

(iii) monitoring equipment;

(d) a monthly summary of management and disposal of the:

(i) industrial wastewaters, and

(ii) specified runoff

as per 4.3.7;

(e) a monthly summary of management and disposal of runoff in general;

(f) a monthly summary of runoff contraventions reported pursuant to 2.1.1; and

(g) any other information as required in writing by the Director.

4.3.19 The approval holder shall submit the Annual Runoff and Industrial Wastewater Report in TABLE 4.3-D to the Director.

4.3.20 The Annual Runoff and Industrial Wastewater Report shall include, at a minimum, all of the following information:

(a) an annual summary assessment of the monitoring results relative to the limits in TABLE 4.3-B;

(b) an annual summary assessment of the monitoring results relative to the limits in TABLE 4.3-C;

(c) an annual summary assessment of the performance of the:

(i) runoff control system,

(ii) pollution abatement equipment, and

(iii) monitoring equipment;

(d) an annual summary of management and disposal of the:

(i) industrial wastewaters, and

(ii) specified runoff

as per 4.3.7;

(e) an annual summary and evaluation of management and disposal of runoff in general;

(f) an annual summary of the results pursuant to 4.3.22;

(g) an annual summary of runoff contraventions reported pursuant to 2.1.1; and

(h) any other information as required in writing by the Director.

4.3.21 The approval holder shall:

(a) collect a representative grab sample from the old surface water detention pond at least once per year, prior to decommissioning and reclamation of the pond;

(b) collect a representative grab sample from each of the new surface water detention ponds at least once per year; and

(c) analyze the samples for all of the parameters specified in TABLE 4.3-E.

TABLE 4.3-E: ANNUAL MONITORING OF SURFACE WATER DETENTION POND

PARAMETERS			
pH	TDS; TSS	Fluoride, dissolved	Phenols
Electrical conductivity	Metals	Cyanide (weak acid dissociable)	Total chlorinated phenols
COD	Major ions	BTEX	Polychlorinated biphenyls, total
DOC	Nutrients	Petroleum Hydrocarbons Fractions F1 and F2	Total organic halogens

4.3.22 The approval holder shall submit the results of the analyses in 4.3.21 to the Director in the Annual Runoff and Industrial Wastewater Report.

SECTION 4.4: LEACHATE COLLECTION AND LEAK DETECTION

OPERATIONS

4.4.1 The approval holder shall only dispose of leachate removed from the leachate collection system by one or more of the following methods:

(a) to facilities holding a current Act authorization to accept such waste;

(b) to facilities approved by a local environmental authority outside of Alberta to accept such waste;

(c) to a disposal well approved by AER; or

(d) as per 4.6.52.

4.4.2 The approval holder shall only dispose of liquid removed from the leak detection system by one or more of the following methods:

(a) to facilities holding a current Act authorization to accept such waste;

(b) to facilities approved by a local environmental authority outside of Alberta to accept such waste;

(c) to a disposal well approved by AER; or

(d) as per 4.6.52.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

LIMITS

4.4.3 Subject to 4.4.4, the approval holder shall not exceed the maximum acceptable leachate head in any landfill cell.

4.4.4 Subsequent to a storm event, the leachate head in any landfill cell shall not exceed the maximum acceptable leachate head for more than fourteen (14) days, unless otherwise authorized in writing by the Director.

4.4.5 The volume of liquid in the leak detection system, as monitored in TABLE 4.6-D, shall not exceed the action leakage rate in any landfill cell.

MONITORING AND REPORTING

4.4.6 The approval holder shall monitor the leachate collection and leak detection systems as required in TABLE 4.6-D and for all parameters specified in TABLE 4.4-A, subject to 4.4.8 and 4.4.9.

4.4.7 The approval holder shall report to the Director the results of the leachate collection and leak detection systems monitoring as required in TABLE 4.6-D, including the results of the analyses for all parameters specified in TABLE 4.4-A, subject to 4.4.8 and 4.4.9.

TABLE 4.4-A: LEACHATE AND LEAK DETECTION LIQUID MONITORING

PARAMETERS		
pH (field and laboratory)	TDS	Nutrients
Electrical conductivity (field and laboratory)	TSS	BTEX
COD	Metals	Phenols
DOC	Major Ions	Petroleum Hydrocarbons Fractions F1 and F2

4.4.8 The requirements in 4.4.6 and 4.4.7 for monitoring and reporting the parameters in TABLE 4.4-A for leachate shall not apply if insufficient leachate is available for conducting the analyses.

4.4.9 The requirements in 4.4.6 and 4.4.7 for monitoring and reporting the parameters in TABLE 4.4-A for leak detection liquid shall not apply if insufficient leak detection liquid is available for conducting the analyses.

4.4.10 If the volume of liquid removed from the leak detection system exceeds the action leakage rate, in addition to reporting pursuant to 2.1.1, the approval holder shall submit a Response Action Plan to the Director within 30 days of the exceedance.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

SECTION 4.5: DUGOUTS AND WATER WELLS IN SURROUNDING AREA

MONITORING AND REPORTING

4.5.1 The approval holder shall:

(a) collect a representative sample from:

(i) each of the dugouts, and

(ii) each of the water wells

within an approximate 1.6 kilometre radius around the facility; and

(b) analyze the sample for the parameters listed in TABLE 4.5-A;

unless the approval holder is not granted access by the landowner.

TABLE 4.5-A: DUGOUT AND WATER WELL MONITORING

PARAMETERS		
pH (field and laboratory)	TDS	Nutrients
Electrical conductivity (field and laboratory)	TSS	BTEX
COD	Metals	Phenols
DOC	Major Ions	Petroleum Hydrocarbons Fractions F1 and F2

4.5.2 The monitoring required in 4.5.1 shall be conducted once each year in October unless otherwise authorized in writing by the Director.

4.5.3 The approval holder shall record the analytical results of the sampling information required in 4.5.1 in an Annual Dugout and Water Well Sampling Program Report.

4.5.4 The approval holder shall submit the Annual Dugout and Water Well Sampling Program Report to the Director pursuant to 4.6.60(i).

SECTION 4.6: HWRSP FACILITY AND LANDFILL

GENERAL

4.6.1 The approval holder shall not:

(a) receive;

(b) process;

(c) dispose of; or

(d) perform any combination of the above for

any of the following wastes, individually or in any combination, at the respective locations specified below:

(i) explosives (Class 1 TDGR wastes), at the facility;

(ii) radioactive wastes (Class 7 TDGR wastes), at the facility;

(iii) radioactive wastes regulated under the *Nuclear Safety and Control Act* (Canada), at the facility;

(iv) biomedical waste, at the facility;

(v) waste containing free liquids, at the landfill, excluding the waste stabilization area;

(vi) material containing ozone depleting substances, at the landfill;

(vii) municipal solid waste, at the facility;

(viii) NORM waste, at the facility;

(ix) waste generating offensive odours, at the facility, unless and until effective control measures are provided to prevent releases of offensive odours to the outside of the facility fenceline.

4.6.2 Incompatible wastes and incompatible hazardous recyclables shall be prevented from mixing.

4.6.3 The approval holder shall dispose of wastes generated at the facility only:

(a) to facilities holding a current Act authorization;

(b) to facilities approved by a local environmental authority outside of Alberta; or

(c) as otherwise authorized in writing by the Director.

HWRSP FACILITY

OPERATIONS PLAN

4.6.4 The approval holder shall:

(a) develop;

(b) keep up-to-date; and

(c) implement

an HWRSP Facility Operations Plan.

4.6.5 The approval holder shall:

(a) review the HWRSP Facility Operations Plan annually, at a minimum; and

(b) update the HWRSP Facility Operations Plan if any of the following circumstances apply:

(i) there are facility expansions or changes in site operations or equipment,

(ii) there is an applicable change to an applicable regulation, or

(iii) an update is required in writing by the Director.

4.6.6 The approval holder shall retain a copy of the most recent HWRSP Facility Operations Plan at the facility.

4.6.7 The approval holder shall submit a copy of the most recent HWRSP Facility Operations Plan to the Director upon written request from the Director within the timeline specified in writing by the Director.

4.6.8 If the HWRSP Facility Operations Plan submitted pursuant to 4.6.7 is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

4.6.9 The approval hold shall implement the latest HWRSP Facility Operations Plan, unless otherwise authorized in writing by the Director.

OPERATIONS

4.6.10 The approval holder shall only transfer wastes and hazardous recyclables at designated transfer areas designed to contain spills and leaks.

4.6.11 The approval holder shall use the following when transferring substances to, from, and between containers, tanks, and trucks:

(a) couplings equipped with seals that are compatible with the substance transferred;

(b) the necessary precautions to prevent spills when the couplings are disconnected;

(c) emergency shut-off valves;

(d) established transfer areas and associated curbing, paving and catchment areas;

(e) drip trays to capture potential losses under coupling devices and other connections; and

(f) manual inspections of the transfer area for leaks and spills during and after waste transfer.

4.6.12 All wastes and all hazardous recyclables that are unloaded shall be immediately transferred to the waste storage area.

4.6.13 All containers and unrinsed empty containers shall be stored in the waste storage area.

4.6.14 The approval holder shall:

(a) provide and maintain an adequate aisle space between containers in the waste storage area to allow:

(i) inspection, and

(ii) unobstructed movement of personnel, fire protection equipment, spill control equipment and decontamination equipment to any area of the waste storage area; and

(b) arrange inspection aisles in the waste storage area such that the identification label on each container is readable.

4.6.15 All tanks within the tank farm area shall be equipped, at a minimum, with all of the following:

(a) sensors for detecting the level in each tank;

(b) high level alarms that activate when a tank overfill is imminent;

(c) automatic shut-off devices or sufficient free board space above the high level sensor to allow operators time to prevent overfill from occurring; and

(d) earthen dikes or equivalent secondary containment structures capable of containing 110% of the volume of the largest tank within the bermed area plus 10% of the aggregate capacity of all other tanks in the bermed area.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.6.16 All tanks containing hazardous waste and all tanks containing hazardous recyclables in each building shall be equipped, at a minimum, with all of the following:

(a) sensors or gauges for detecting the level in each tank;

(b) a written operating procedure to prevent tank overfill; and

(c) secondary containment structures capable of containing 110% of the volume of the largest tank within the building plus 10% of the aggregate capacity of all other tanks containing hazardous waste and hazardous recyclables in the same building.

4.6.17 Hazardous waste and hazardous recyclables stored in containers and tanks shall be stored in accordance with the *Hazardous Waste Storage Guidelines*, June 1988, Alberta Environment, as amended.

4.6.18 The approval holder shall only carry out the following activities, individually or in any combination, at the HWRSP Facility in relation to hazardous waste or hazardous recyclables or both:

(a) commingling of hazardous waste or hazardous recyclables to make maximum use of available container or tank capacity, only if the resultant mixture has the same TDGR hazard classification as any one of the individual components;

(b) phase separation by gravity settling, only without the addition of any chemicals designed to accelerate settling;

(c) dispersion of solids into liquids by natural or mechanical means, only if the resultant mixture has the same TDGR hazard classification as the original waste;

(d) physical segregation of hazardous from non-hazardous articles or components from the same container, only if no process equipment is used;

(e) washing of drums or other objects, only for the purpose of removing hazardous residue;

(f) crushing or shredding of used filters, rags, absorbent materials, or empty containers, only for the purpose of volume reduction or liquid recovery, unless otherwise authorized in writing by the Director; or

(g) treatment of hazardous waste, only as authorized in writing by the Director.

4.6.19 Notwithstanding 4.6.18(g), the approval holder shall not incinerate waste at the facility.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

LIMITS

4.6.20 The approval holder shall not store a total of more than 752,500 litres of hazardous waste or hazardous recyclables or both at the HWRSP Facility at any time.

4.6.21 In addition to the storage limits in 4.6.20, the approval holder shall not exceed the waste storage limits as specified in TABLE 4.6-A.

TABLE 4.6-A: STORAGE LIMITS FOR HAZARDOUS WASTE OR HAZARDOUS RECYCLABLES OR BOTH AT HWRSP FACILITY

Waste/Recyclable Type	Material	Maximum Quantity
Containers: Hazardous waste or hazardous recyclables or both	TDGR Classification 2, 3, 4, 5, 6, 8 or 9 waste type only	512,500 litres (consisting of 2,500 drum equivalents, each 205 litre capacity)
Bulk Tanks: Hazardous waste or hazardous recyclables or both	Waste flammable liquids, used oil, or wastewaters; or TDGR Classification 3, 5, 6, 8 or 9 waste type only	240,000 litres (consisting of a total of 135 m^3 in the tank farm area, and a total of 105 m^3 inside the buildings)

4.6.22 Containers other than 205 litre drums shall be prorated to 205 litre drum equivalents based on their nominal volumes, e.g., 10 X 20 litre pails = 1 X 205 litre drum.

4.6.23 The limits referred to in 4.6.20 and 4.6.21 shall be calculated based on the:

(a) total nominal volumes of all containers, treating all partially filled containers as if they were full; and

(b) total filled capacities of all tanks.

MONITORING AND REPORTING

4.6.24 The approval holder shall:

(a) identify;

(b) characterize; and

(c) classify

all waste streams and all hazardous recyclables, generated or received at the HWRSP Facility, not including runoff, industrial wastewater streams and air effluent streams in accordance with the:

(i) *Industrial Waste Identification and Management Options*, Alberta Environment, May 1996, as amended, and

(ii) *Alberta User Guide for Waste Managers*, Alberta Environment, August 1996, as amended.

4.6.25 The approval holder shall measure or, when not feasible to measure, estimate, the quantity of each waste and hazardous recyclable identified in 4.6.24 each year.

4.6.26 The approval holder shall keep a daily:

(a) total; and

(b) inventory

of all materials being stored at the HWRSP Facility.

4.6.27 The daily total and inventory records in 4.6.26 shall be available at the facility at all times for inspection by the Director or an inspector.

4.6.28 The approval holder shall submit a Monthly Waste Management Report to the Director.

4.6.29 The approval holder shall compile all of the information indicated in TABLE 4.6-B in the Monthly Waste Management Report which shall contain, at minimum, all of the following information:

(a) an opening waste and hazardous recyclables inventory balance in kilograms or litres by waste class or material type;

(b) the amount and type of waste and hazardous recyclables received:

(i) within the province, and

(ii) from outside the province;

(c) the amount and type of waste and hazardous recyclables:

(i) shipped for recycling or product,

(ii) shipped off-site for disposal, and

(iii) disposed on-site;

(d) any adjustments, including but not limited to, consolidation, reclassification, losses to processing, spills, volume miscalculations, or any other

TERMS AND CONDITIONS ATTACHED TO APPROVAL

** Identity the amount and reason for each adjustment.
Adjustments include consolidation/reclassification, losses to processing, spills, volume miscalculations, or any other circumstances, which would affect the mass balance of the monthly inventory report.

circumstances, which would affect the mass balance of the monthly inventory report;

(e) closing balance in kilograms or litres;

(f) a summary of contraventions reported pursuant to 2.1.1 related to waste and hazardous recyclables; and

(g) any other information as required in writing by the Director.

4.6.30 The approval holder shall compile all the information required by 4.6.24 and 4.6.25 in an Annual Waste Management Summary Report:

(a) as specified in TABLE 4.6-C; and

(b) in accordance with the:

(i) *Industrial Waste Identification and Management Options*, Alberta Environment, May 1996, as amended, and

(ii) *Alberta User Guide for Waste Managers*, Alberta Environment, August 1996, as amended.

TABLE 4.6-C: ANNUAL WASTE MANAGEMENT SUMMARY

Waste or Hazardous Recyclable Name	Uniform Waste Code				Quantity (kg or L)		Stored	Recycled		Disposed

				TOTAL							

4.6.31 The approval holder shall submit the Annual Waste Management Summary Report to the Director.

LANDFILL

OPERATIONS PLAN

4.6.32 The approval holder shall:

(a) develop;

(b) keep up-to-date; and

(c) implement

a Landfill Operations Plan that does not contravene with the requirements of this approval.

4.6.33 The approval holder shall:

(a) review the Landfill Operations Plan annually, at a minimum; and

(b) update the Landfill Operations Plan if any of the following circumstances apply:

(i) there are facility expansions or changes in site operations or equipment,

(ii) there is an applicable change to the *Standards for Landfills in Alberta,* as amended,

(iii) an update is required in writing by the Director, or

(iv) there is an update to an applicable regulation.

4.6.34 The Landfill Operations Plan shall include, at a minimum, all of the following:

(a) SOP for keeping and maintaining an Operating Record;

(b) SOP for waste control, run-on and runoff controls, and nuisance controls;

(c) SOP for the waste stabilization area operations;

(d) SOP for the acceptance, handling and disposal of wastes, including;

(i) waste characterization and classification at source,

(ii) waste manifesting and tracking,

(iii) QA/QC waste acceptance procedures, and

(iv) waste sampling;

(e) SOP for detecting, preventing and disposal of unauthorized wastes;

(f) SOP for placing waste in a landfill cell including;

(i) working face width,

(ii) lift depth,

(iii) compaction, and

(iv) waste placement location using a grid system;

(g) SOP for managing contaminated sulphur and sulphur containing wastes;

(h) SOP for managing asbestos wastes;

(i) SOP for placing leachate, leak detection liquid, or other authorized wastes and liquids over the surface of the active landfill area for the purpose of evaporation or dust suppression;

(j) SOP for lab screening of pyrophoric wastes for water quenching;

(k) SOP for water quenching treatment of pyrophoric wastes;

(l) an Odour and Fugitive Dust Response Program, including odour from the HWRSP Facility;

(m) a Fugitive Dust and Odour Best Management Plan, including odour from the HWRSP Facility;

(n) a runoff and industrial wastewater monitoring and management program;

(o) a leachate monitoring and management program;

(p) a leak detection liquid monitoring and management program;

(q) a groundwater monitoring program;

(r) a Remediation Plan to deal with groundwater quality deterioration;

(s) a soil monitoring program;

(t) a soil management program;

(u) a landfill cell cover system;

(v) a monitoring and maintenance program for the scale house and heavy operational equipment;

(w) a health and safety program;

(x) a Facility Wildlife Management Plan, pursuant to 4.1.15;

(y) a Community Complaint Response Plan, pursuant to 4.1.22;

(z) a Facility Emergency Management Plan, pursuant to 4.1.30; and

(aa) an up-to-date plan of the landfill layout with survey records showing the location of all infrastructure components of the landfill including final cover elevations and contours.

4.6.35 The approval holder shall include, at a minimum, all of the following in the SOP referred to in 4.6.34(j) for lab screening of pyrophoric wastes to assess the suitability of using water quenching to neutralize the reactivity of the pyrophoric wastes:

(a) procedures and methods for obtaining representative pyrophoric wastes sample for lab test;

(b) procedures and methods for conducting lab screening test using representative sample of pyrophoric wastes, including:

(i) setup of lab test equipment,

(ii) test procedures,

(iii) collection of samples of off-gases from lab water quenching test,

(iv) screening parameters, including, at a minimum, odour, ammonia, H_2S, PM, total metals, VOCs, TNMOCs, and total hydrocarbons, and

(v) analytical methods for testing the screening parameters;

(c) assessment of lab test results and passing criteria for screening; and

(d) documentation and record keeping of lab screening test results.

4.6.36 The approval holder shall retain a copy of the most recent Landfill Operations Plan at the facility.

4.6.37 The approval holder shall submit to the Director the most recent Landfill Operations Plan when requested in writing by the Director within the timeline specified in writing by the Director.

4.6.38 The approval holder shall correct all deficiencies in the Landfill Operations Plan submitted pursuant to 4.6.37, as outlined in writing by the Director, within the timeline specified in writing by the Director.

4.6.39 The approval holder shall implement the latest Landfill Operations Plan, unless otherwise authorized in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

OPERATIONS

4.6.40 The approval holder shall classify all materials entering the landfill in accordance with the:

(a) *Waste Control Regulation (AR 192/96)*;

(b) *Industrial Waste Identification and Management Options*, Alberta Environment, May 1996, as amended; and

(c) *Alberta User Guide for Waste Managers*, May 1995, as amended.

4.6.41 The approval holder shall obtain a detailed representative physical and chemical analysis of a waste prior to disposal of the waste into the landfill at the following times, at a minimum:

(a) the first time a waste is received from a new generator;

(b) the first time a delivery is received from a different process associated with a known waste generator;

(c) the first time a waste is received from a different location associated with a known waste generator; and

(d) when the nature or composition of the waste that was previously characterized by the generator changes.

4.6.42 The approval holder shall not dispose of hazardous waste in any Class II landfill cell.

4.6.43 The approval holder:

(a) shall only carry out waste stabilization or solidification or both within the waste stabilization area(s);

(b) shall only operate waste:

(i) receiving, and

(ii) stabilization

area(s) as descried in the application;

(c) shall not transfer waste from the waste stabilization area to the Class I landfill cell before the waste stabilization or solidification or both have been completed; and

(d) may treat pyrophoric wastes by water quenching only within the waste stabilization area, subject to passing lab screening criteria;

unless otherwise authorized in writing by the Director.

4.6.44 The approval holder shall only dispose of any liquid collected within the waste stabilization area by one or more of the following methods:

(a) to facilities holding a current Act authorization to accept such waste;

(b) to facilities approved by a local environmental authority outside of Alberta to accept such waste;

(c) to a disposal well approved by AER; or

(d) as otherwise authorized in writing by the Director.

4.6.45 The approval holder shall conduct:

(a) annually, in-house visual inspections for corrosion; and

(b) biennially, ultrasonic testing to monitor thickness

of the steel plate liner of the stabilization pits in the waste stabilization area, unless otherwise authorized in writing by the Director.

4.6.46 The approval holder shall dispose of asbestos wastes in accordance with *"Guidelines for the Disposal of Asbestos Waste",* Environmental Protection Services, Alberta Environment, 1989, as amended.

4.6.47 The approval holder shall dispose of sulphur waste in accordance with *"Guidelines for Landfill Disposal of Sulphur Wastes and Remediation of Sulphur Containing Soils"*, Alberta Environment, 2011, as amended.

4.6.48 The approval holder shall only dispose of wastes that the landfill is not authorized to dispose of:

(a) to facilities holding a current Act authorization;

(b) to facilities approved by a local environmental authority outside of Alberta; or

(c) as otherwise authorized in writing by the Director.

4.6.49 If an unauthorized waste is received at the landfill, the approval holder shall remove the waste from the landfill within seven (7) days of the receipt, unless otherwise authorized in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.6.50 The approval holder shall restrict the working face of each landfill cell to the smallest practical area.

4.6.51 For any waste disposed of at the landfill that is subject to wind dispersal or release of offensive odours or both, the approval holder shall:

(a) wet the waste to prevent dispersal of particulate matter; and

(b) immediately apply effective cover on top of the waste to control releases of:

(i) particulate matter, and

(ii) offensive odours.

4.6.52 Notwithstanding 4.6.1(v), the approval holder may place any of the following wastes over the surface of the active landfill area for the purpose of dust suppression:

(a) specified runoff;

(b) leachate;

(c) leak detection liquid;

(d) sump waste of car wash bays or similar operations;

(e) waste from hydrovac excavation operations; or

(f) any other waste authorized by t*he Alberta User Guide for Waste Managers*, May 1995, as amended;

provided that placement of such wastes will not cause offensive odours.

4.6.53 The approval holder shall inspect the landfill, at a minimum:

(a) weekly; and

(b) immediately after each storm event to:

(i) detect evidence of deterioration of any infrastructure components, including the composite liner,

(ii) detect any malfunction or improper operation of the run-on and runoff control systems, leachate collection system, or leak detection system, and

(iii) take corrective measures to repair any damage to infrastructure components, including the composite liner.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.6.54 The approval holder shall:

(a) keep a record of inspections conducted pursuant to 4.6.53;

(b) have the record of inspections available for review upon written request from the Director; and

(c) immediately report any deficiencies detected by the inspection in 4.6.53 to the Director in writing along with any corrective measures taken or proposed.

4.6.55 The approval holder shall not stockpile waste exceeding the maximum designated waste elevation of the landfill for a period of more than two (2) weeks, unless otherwise authorized in writing by the Director.

4.6.56 The approval holder shall take all practical and effective measures to prevent off-site tracking of waste from vehicles and equipment leaving the facility.

4.6.57 The approval holder shall operate the laydown area in the NE 9-50-17 W4M area of the facility only as described in the application.

MONITORING AND REPORTING

4.6.58 The approval holder shall monitor the landfill operations as required in TABLE 4.6-D.

4.6.59 The approval holder shall report to the Director the results of the landfill operations monitoring as required in TABLE 4.6-D.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

TABLE 4.6-D: LANDFILL OPERATIONS MONITORING AND REPORTING REQUIREMENTS

MONITORING AND REPORTING				
Parameter	**Frequency**	**Sample Type**	**Sampling Location**	**Reporting**
Quantity and type of waste received	Continuously, When operating	Measured or estimated	At entrance to landfill	Annual Landfill Operations Report
Quantity and type of material removed	Continuously, when operating	Measured or estimated	At entrance to landfill	
General location of waste deposited	Continuously, when operating	As per survey, or using grid system	At active landfill area, or survey coordinates	
Leachate head	at least: - once every three working days; - after storm event; and - immediately prior to leachate removal	Calculated	At primary leachate collection system sumps for existing landfill Cell 1	
		Measured	At primary leachate collection system sumps for all other landfill cells	
Leachate analysis, as per TABLE 4.4-A	At least once every quarter year, unless insufficient sample volume is available	Grab sample	At each primary leachate collection system sump	
Volume of leachate removed from the leachate collection system	As removed	Measured or calculated	At leachate collection system sumps	
Leak detection liquid analysis, as per TABLE 4.4-A	At least once every quarter year, unless insufficient sample volume is available	Grab sample	At each leak detection system sump	
Volume of leak detection liquid removed from the leak detection system	At least once every working day, as removed	Measured or calculated	At leak detection system sumps	
Final cover	When final cover is applied	Final cover by survey cores or test pits or both	On each completed landfill cell	

4.6.60 The Annual Landfill Operations Report required in TABLE 4.6-D shall include, at a minimum, all of the following:

(a) the name and contact information of the person responsible for the facility;

(b) a summary of all information collected as required in TABLE 4.6-D;

(c) a summary of the results of any audit conducted in accordance with 4.1.7;

(d) a summary of the operations of the waste stabilization area;

(e) a summary of the performance of the run-on and runoff control systems, including a comparison to the limits in TABLES 4.3-B and 4.3-C;

(f) a summary of the performance of the leachate collection system, including a comparison to the maximum acceptable leachate head;

(g) a summary of the performance of the leak detection system, including a comparison to the action leakage rate limit;

(h) the Response Action Plan for the leak detection system pursuant to 4.4.10;

(i) the Annual Dugout and Water Well Sampling Program Report pursuant to 4.5.4;

(j) a summary of all revisions to the Landfill Operations Plan pursuant to 4.6.33(b);

(k) any groundwater remedial action taken pursuant to 4.6.34(r);

(l) a summary of records of landfill inspections pursuant to 4.6.53;

(m) a summary of:

  (i) operational issues encountered,

  (ii) emergencies occurred, and

  (iii) measures or actions taken;

(n) a summary of records of:

  (i) public complaints, and

  (ii) the approval holder's responses;

(o) an up-to-date financial security estimate pursuant to 5.1.2;

(p) an updated site development plan showing the status of the landfill progression at the end of the operating year, including but not limited to:

  (i) contour mapping,

  (ii) the location of active and inactive disposal areas,

  (iii) areas where a final cover has been placed, and

  (iv) the location of new landfill cell(s) constructed;

(q) the Annual Landfill Cell Closure Report pursuant to 7.1.7;

(r) a summary of contraventions reported pursuant to 2.1.1 related to landfill operations; and

(s) any other information as required in writing by the Director.

4.6.61 The approval holder shall submit the Annual Landfill Operations Report to the Director.

SECTION 4.7: DOMESTIC WASTEWATER

OPERATIONS

4.7.1 The approval holder shall not release any substances from the domestic wastewater system to the surrounding watershed except as authorized by this approval.

4.7.2 The approval holder shall direct all domestic wastewater to the domestic wastewater system.

4.7.3 The approval holder shall only dispose of substances from the domestic wastewater system:

(a) to facilities holding a current Act authorization;

(b) to facilities approved by a local environmental authority outside of Alberta; or

(c) as otherwise authorized in writing by the Director.

SECTION 4.8: WATERWORKS

Not used at this time.

SECTION 4.9: GROUNDWATER

BASELINE MONITORING AND REPORTING

4.9.1 The approval holder shall submit a proposal for a Baseline Groundwater Monitoring Program for the NE 9-50-17 W4M area of the facility on or before October 31, 2022, unless otherwise authorized in writing by the Director.

4.9.2 If the Baseline Groundwater Monitoring Program proposal submitted pursuant to 4.9.1 is found deficient by the Director, the approval holder shall correct all deficiencies as outlined in writing by the Director within the timeline specified in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.9.3 The approval holder shall implement the Baseline Groundwater Monitoring Program referred to in 4.9.1 as authorized in writing by the Director prior to commencing operation of any new landfill cell(s) in the NE 9-50-17 W4M area of the facility, unless otherwise authorized in writing by the Director.

4.9.4 The approval holder shall submit a Baseline Groundwater Monitoring Program Report to the Director within six (6) months of completing the Baseline Groundwater Monitoring Program, unless otherwise authorized in writing by the Director.

MONITORING

4.9.5 The approval holder shall continue to implement the existing Groundwater Monitoring Program as authorized in writing by the Director, unless and until otherwise authorized in writing by the Director pursuant to 4.9.8.

4.9.6 The approval holder shall submit a revised Groundwater Monitoring Program to the Director on or before December 31, 2022, unless otherwise authorized in writing by the Director.

4.9.7 If the revised Groundwater Monitoring Program submitted pursuant to 4.9.6 is found deficient by the Director, the approval holder shall correct all deficiencies as outlined in writing by the Director within the timeline specified in writing by the Director.

4.9.8 The approval holder shall implement the revised Groundwater Monitoring Program submitted pursuant to 4.9.6 as authorized in writing by the Director within the timeline specified in writing by the Director.

4.9.9 The approval holder shall:

(a) collect a representative groundwater sample from each of the groundwater monitor wells specified in the Groundwater Monitoring Program, including the groundwater monitoring wells designated as points of compliance; and

(b) analyze each sample for the parameters listed in TABLE 4.9-A.

TABLE 4.9-A: GROUNDWATER MONITORING PROGRAM

PARAMETERS	
pH	Metals
Electrical conductivity	Major ions
COD	Nutrients
DOC	BTEX
TDS	Petroleum Hydrocarbons Fractions F1 and F2

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.9.10 The monitoring required in 4.9.9 shall be conducted at the following frequencies, unless otherwise authorized in writing by the Director:

(a) a minimum of once per year during each of the active landfill life, landfill cell closure, final landfill closure, and post-closure periods; and

(b) a minimum of four times per year following detection of leachate constituents in groundwater at levels above those specified in 4.9.11, and until the levels specified in 4.9.11 have been met.

4.9.11 The groundwater quality in the monitoring wells, designated as points of compliance in the Groundwater Monitoring Program, shall not exceed the higher of:

(a) the objectives established in the water quality objectives in the *Canadian Environmental Quality Guidelines (CEQG)* for drinking water published by the Canadian Council of Ministers of the Environment (CCME), as amended; or

(b) background groundwater chemistry as determined through a statistical analysis, as a derived alternate groundwater performance standard.

4.9.12 The approval holder shall implement the Remediation Plan as specified in the Landfill Operations Plan, when groundwater quality exceeds the groundwater performance criteria in 4.9.11.

4.9.13 The samples extracted from the groundwater monitor wells shall be collected using scientifically acceptable purging, sampling and preservation procedures so that a representative groundwater sample is obtained.

4.9.14 The approval holder shall:

(a) protect from damage; and

(b) keep locked except when being sampled

all groundwater monitoring wells unless otherwise authorized in writing by the Director.

4.9.15 If a representative groundwater sample cannot be collected because the groundwater monitoring well is damaged or is no longer capable of producing a representative groundwater sample, the approval holder shall:

(a) clean, repair or replace the groundwater monitoring well; and

(b) collect and analyse a representative groundwater sample prior to the next scheduled sampling event;

unless otherwise authorized in writing by the Director.

4.9.16 In addition to the sampling information recorded in 2.2.1, the approval holder shall record the following sampling information for all groundwater samples collected:

(a) a description of purging and sampling procedures;

(b) the static elevations above sea level, and depth below ground surface of fluid phases in the groundwater monitoring well prior to purging;

(c) the temperature of each sample at the time of sampling;

(d) the pH of each sample at the time of sampling; and

(e) the specific conductance of each sample at the time of sampling.

4.9.17 The approval holder shall carry out remediation of the groundwater in accordance with the following:

(a) *Alberta Tier 1 Soil and Groundwater Remediation Guidelines*, Alberta Environment, February 2009, as amended; and

(b) *Alberta Tier 2 Soil and Groundwater Remediation Guidelines*, Alberta Environment, February 2009, as amended.

REPORTING

4.9.18 The approval holder shall compile an Annual Groundwater Monitoring Program Report which shall include, at a minimum, all of the following information:

(a) a completed *Record of Site Condition Form*, Alberta Environment, 2009, as amended;

(b) a legal land description of the facility and a map illustrating the facility boundaries;

(c) a topographic map of the facility;

(d) a description of the industrial activity and processes;

(e) a map showing the location of all surface and groundwater users, and a listing describing surface water and water well use details, within at least a 1.6 kilometre radius of the facility;

(f) a general hydrogeological characterization of the region within a five kilometre radius of the facility;

TERMS AND CONDITIONS ATTACHED TO APPROVAL

(g) a detailed hydrogeological characterization of the facility, including an interpretation of groundwater flow patterns;

(h) cross-sections showing depth to water table, patterns of groundwater movement and hydraulic gradients at the facility;

(i) borehole logs and completion details for groundwater monitoring wells;

(j) a map showing locations of all known buried channels within at least five kilometre of the facility;

(k) a map of surface drainage within the facility and surrounding area to include nearby water bodies;

(l) a map of groundwater monitoring well locations and a table summarizing the existing groundwater monitoring program for the facility;

(m) a summary of any changes to the groundwater monitoring program made since the last groundwater monitoring report;

(n) analytical data recorded as required in 4.9.9 and 4.9.15(b);

(o) a summary of fluid elevations recorded as required in 4.9.16(b) and an interpretation of changes in fluid elevations;

(p) an interpretation of QA/QC program results;

(q) an interpretation of all the data in this report, including the following:

  (i) diagrams indicating the location and extent of any contamination,

  (ii) a description of probable sources of contamination, and

  (iii) a site map showing the location and type of current and historical potential sources of groundwater contamination;

(r) a summary and interpretation of the data collected since the groundwater monitoring program began including:

  (i) control charts which indicate trends in concentrations of parameters, and

  (ii) the migration of contaminants;

(s) a description of the following:

  (i) contaminated groundwater remediation techniques employed,

(ii) source elimination measures employed,

(iii) risk assessment studies undertaken, and

(iv) risk management studies undertaken;

(t) a proposed sampling schedule for the following year(s);

(u) a description of any contaminant remediation, risk assessment or risk management action conducted at the facility; and

(v) recommendations for:

(i) changes to the groundwater monitoring program to make it more effective, and

(ii) remediation, risk assessment or risk management of contamination identified.

4.9.19 The approval holder shall submit the Annual Groundwater Monitoring Program Report to the Director.

4.9.20 If the Annual Groundwater Monitoring Program Report is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director, within the timeline specified in writing by the Director.

SECTION 4.10: SOIL

4.10.1 In addition to any other requirements specified in this approval, the approval holder shall conduct all of the following activities related to soil monitoring and soil management required by this approval in accordance with the *Soil Monitoring Directive,* Alberta Environment, 2009, as amended:

(a) designing and developing proposals for the Soil Monitoring Program;

(b) designing and developing proposals for the Soil Management Program;

(c) all other actions, including sampling, analysing, and reporting, associated with the Soil Monitoring Program; and

(d) all other actions, including sampling, analysing and reporting, associated with the Soil Management Program.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

BASELINE MONITORING AND REPORTING

4.10.2 The approval holder shall submit a proposal for a Baseline Soil Monitoring Program for the NE 9-50-17 W4M area of the facility on or before October 31, 2022, unless otherwise authorized in writing by the Director.

4.10.3 If the Baseline Soil Monitoring Program proposal submitted pursuant to 4.10.2 is found deficient by the Director, the approval holder shall correct all deficiencies as outlined in writing by the Director within the timeline specified in writing by the Director.

4.10.4 The approval holder shall implement the Baseline Soil Monitoring Program referred to in 4.10.2 as authorized in writing by the Director prior to commencing operation of any new landfill cell(s) in the NE 9-50-17 W4M area of the facility, unless otherwise authorized in writing by the Director.

4.10.5 The approval holder shall submit a Baseline Soil Monitoring Program Report to the Director within six (6) months of completing the Baseline Soil Monitoring Program, unless otherwise authorized in writing by the Director.

MONITORING AND REPORTING

4.10.6 The approval holder shall submit the Soil Monitoring Program proposal to the Director according to the following schedule:

(a) for the first soil monitoring event on or before January 31, 2019; and

(b) for the second soil monitoring event on or before January 31, 2024;

unless otherwise authorized in writing by the Director.

4.10.7 If any Soil Monitoring Program proposal is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

4.10.8 Subject to 4.10.7, the approval holder shall implement the Soil Monitoring Program as authorized in writing by the Director.

4.10.9 If an authorization or a deficiency letter is not issued within 120 days of the applicable date required by 4.10.6, the approval holder shall implement the Soil Monitoring Program:

(a) in accordance with the program as set out in the proposal submitted by the approval holder; and

(b) within 270 days after the applicable date required by 4.10.6.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

4.10.10 The approval holder shall submit to the Director each Soil Monitoring Program Report obtained from the soil monitoring referred to in 4.10.8 and 4.10.9 according to the following schedule:

(a) for the first Soil Monitoring Program Report on or before January 31, 2020; and

(b) for the second Soil Monitoring Program Report on or before January 31, 2025;

unless otherwise authorized in writing by the Director.

4.10.11 If any Soil Monitoring Program Report is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

SOIL MANAGEMENT PROGRAM

4.10.12 If the Soil Monitoring Program, or any other soil monitoring, reveals that there are substances present in the soil at concentrations greater than any of the applicable concentrations set out in the standards in the *Soil Monitoring Directive*, Alberta Environment, 2009, as amended, the approval holder shall develop a Soil Management Program Proposal.

4.10.13 If a Soil Management Program Proposal is required pursuant to 4.10.12, the approval holder shall submit a Soil Management Program Proposal to the Director according to the following schedule:

(a) for Soil Management Program Proposal that is triggered by the findings from the first soil monitoring event on or before the date in 4.10.10(a);

(b) for Soil Management Program Proposal that is triggered by the findings from a second soil monitoring event on or before the date in 4.10.10(b); or

(c) for any other soil monitoring event not specified in this approval within six months of completion of the soil monitoring event.

4.10.14 If any Soil Management Program Proposal is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

4.10.15 The approval holder shall implement the Soil Management Program as authorized in writing by the Director.

4.10.16 If the approval holder is required to implement a Soil Management Program pursuant to 4.10.15, the approval holder shall submit a written Soil Management

TERMS AND CONDITIONS ATTACHED TO APPROVAL

Program Report to the Director on or before March 31 of each year following the year in which the information was collected.

4.10.17 If any Soil Management Program Report is found deficient by the Director, the approval holder shall correct all deficiencies identified by the Director by the date specified in writing by the Director.

PART 5: FINANCIAL SECURITY REQUIREMENTS

5.1.1 The approval holder shall annually review and revise the cost estimate for reclamation of the facility including decommissioning and land reclamation.

5.1.2 The annual revised cost estimate for the facility shall be submitted to the Director by March 31 of each year.

5.1.3 The approval holder shall review and revise the cost estimate for reclamation of the facility when one or more of the following occurs:

(a) the cost estimate of future conservation and reclamation of the facility changes;

(b) the extent of the operation of the facility is increased or reduced;

(c) the facility or any portion of it is conserved and reclaimed;

(d) the conservation and reclamation plan required by this approval is changed; or

(e) the activities conducted at the facility for which security is required is increased or decreased.

5.1.4 The approval holder shall submit the revised cost estimate arising from 5.1.3 to the Director within 30 days after the occurrence of any of the circumstances described in 5.1.3.

5.1.5 The approval holder shall provide additional financial security as required in writing by the Director.

5.1.6 The approval holder shall renew the financial security for the facility at least 30 days prior to the date it expires.

5.1.7 The approval holder shall maintain the financial security for the facility until returned in accordance with the Act or the regulations.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

PART 6: DECOMMISSIONING AND LAND RECLAMATION OF HWRSP FACILITY

SECTION 6.1: GENERAL

6.1.1 The approval holder shall apply for an amendment to this approval to reclaim the HWRSP Facility by submitting to the Director:

(a) a Decommissioning Plan; and

(b) a Land Reclamation Plan.

6.1.2 The approval holder shall submit the:

(a) Decommissioning Plan; and

(b) Land Reclamation Plan

referred to in 6.1.1 within six (6) months of the HWRSP Facility ceasing operation, except for repairs and maintenance, unless otherwise authorized in writing by the Director.

SECTION 6.2: DECOMMISSIONING

6.2.1 The Decommissioning Plan referred to in 6.1.1 shall include, at a minimum, all of the following:

(a) a plan for dismantling the HWRSP Facility;

(b) a comprehensive study to determine the nature, degree and extent of contamination at the HWRSP Facility and affected lands;

(c) a plan to manage all wastes at the HWRSP Facility;

(d) evaluation of remediation technologies proposed to be used at the HWRSP Facility and affected lands;

(e) a plan for decontamination of the HWRSP Facility and affected lands in accordance with the following:

(iii) for soil or groundwater, *Alberta Tier 1 Soil and Groundwater Remediation Guidelines*, Alberta Environment, February 2009, as amended,

(iv) for soil or groundwater, *Alberta Tier 2 Soil and Groundwater Remediation Guidelines*, Alberta Environment, February 2009, as amended,

(v) for drinking water, *Canadian Environmental Quality Guidelines*, Canadian Council of Ministers of the Environment, PN 1299, 1999, as amended, and

(vi) for surface water, *Surface Water Quality Guidelines for Use in Alberta*, Alberta Environment, November 1999, as amended;

(f) confirmatory testing to indicate compliance with the remediation objectives;

(g) a plan for maintaining and operating contaminant monitoring systems;

(h) a schedule for activities (a) through (g) above; and

(i) any other information as required in writing by the Director.

6.2.2 If the Decommissioning Plan is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

SECTION 6.3: LAND RECLAMATION

6.3.1 The Land Reclamation Plan referred to in 6.1.1 shall include, at a minimum, all of the following:

(a) the final use of the reclaimed area and how equivalent land capability will be achieved;

(b) removal of infrastructure;

(c) restoration of drainage;

(d) soil replacement;

(e) erosion control;

(f) revegetation and conditioning of the HWRSP Facility including:

(i) species list, seed source and quality, seeding rates and methods,

(ii) fertilization rates and methods, and

(iii) wildlife habitat plans where applicable;

(g) reclamation schedule; and

(h) any other information as required in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

6.3.2 If the Land Reclamation Plan is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

PART 7: FINAL LANDFILL CLOSURE AND POST-CLOSURE

SECTION 7.1: LANDFILL CELL CLOSURE AND MAINTENANCE

7.1.1 The approval holder shall submit a Landfill Cell Closure Plan for individual landfill cell closure to the Director on or before September 30, 2017, unless otherwise authorized in writing by the Director.

7.1.2 The Landfill Cell Closure Plan submitted pursuant to 7.1.1 shall be signed and stamped by a professional registered with APEGA.

7.1.3 If the Landfill Cell Closure Plan submitted pursuant to 7.1.1 is found deficient by the Director, the approval holder shall correct all deficiencies as outlined in writing by the Director within the timeline specified in writing by the Director.

7.1.4 The approval holder shall implement the Landfill Cell Closure Plan submitted pursuant to 7.1.1 as authorized in writing by the Director.

7.1.5 The approval holder shall maintain the closed landfill cells to:

(a) protect and maintain the integrity of the final cover and surface water drainage systems;

(b) prevent erosion;

(c) prevent surface water ponding;

(d) remediate areas affected by subsidence and differential settlement; and

(e) prevent leachate break out.

7.1.6 If the approval holder completes landfill cell closure in a year, the approval holder shall prepare an Annual Landfill Cell Closure Report, and include, at a minimum, all of the following information in the Report:

(a) as-built plans and details on the location of landfill cells that have been closed;

(b) certified construction QA/QC procedures employed during cover construction and installation; and

(c) survey reports showing the final cover depths.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

7.1.7 The approval holder shall submit the Annual Landfill Cell Closure Report with the Annual Landfill Operations Report required in 4.6.60.

SECTION 7.2: FINAL LANDFILL CLOSURE AND POST-CLOSURE

7.2.1 The approval holder shall apply for an amendment to this approval for final landfill closure by submitting to the Director:

(a) a Detailed Final Landfill Closure Plan ; and

(b) a Landfill Post-Closure Plan.

7.2.2 The approval holder shall submit the:

(a) Detailed Final Landfill Closure Plan; and

(b) Landfill Post-Closure Plan

referred to in 7.2.1 within six (6) months of the landfill ceasing operations, unless otherwise authorized in writing by the Director.

DETAILED FINAL LANDFILL CLOSURE PLAN

7.2.3 The Detailed Final Landfill Closure Plan shall be developed in accordance with sections 6.1(b) and 6.1(c) of the *Standards for Landfills in Alberta*, as amended.

7.2.4 In addition to 7.2.3, the Detailed Final Landfill Closure Plan shall include, at a minimum, all of the following:

(a) a plan for replacement of soil;

(b) a QA/QC Program; and

(c) any deviations from the most recently submitted closure plan.

7.2.5 The Detailed Final Landfill Closure Plan shall be signed and stamped by a professional registered with APEGA.

7.2.6 If the Detailed Final Landfill Closure Plan is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

7.2.7 The approval holder shall implement the Detailed Final Landfill Closure Plan as authorized in writing by the Director.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

LANDFILL POST-CLOSURE PLAN

7.2.8 The Landfill Post-Closure Plan shall be developed in accordance with sections 6.2 and 6.3 of the *Standards for Landfills in Alberta*, as amended.

7.2.9 In addition to 7.2.8, the Landfill Post-Closure Plan shall include, at a minimum, all of the following:

(a) the groundwater monitoring program including performance standards and points of compliance;

(b) the subsurface landfill gas monitoring program and performance standards at points of compliance;

(c) a plan for erosion control;

(d) a plan for maintaining vegetative cover; and

(e) any other information requested in writing by the Director.

7.2.10 The Landfill Post-Closure Plan shall be signed and stamped by a professional registered with APEGA.

7.2.11 If the Landfill Post-Closure Plan is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

7.2.12 The approval holder shall implement the Landfill Post-Closure Plan as authorized in writing by the Director.

PART 8: DECOMMISSIONING AND LAND RECLAMATION OF OLD SURFACE WATER DETENTION POND

8.1.1 The approval holder shall:

(a) decommission; and

(b) reclaim

the old surface water detention pond prior to construction of Cell 4.

8.1.2 The approval holder shall submit a Decommissioning and Land Reclamation Plan for the old surface water detention pond to the Director a minimum of six (6) months prior to decommissioning and land reclamation of the pond.

TERMS AND CONDITIONS ATTACHED TO APPROVAL

8.1.3 If the Decommissioning and Land Reclamation Plan is found deficient by the Director, the approval holder shall correct all deficiencies identified in writing by the Director by the date specified in writing by the Director.

June 21, 2022
DATE SIGNED

DESIGNATED DIRECTOR UNDER THE ACT
Mohammad Habib, P. Eng.

APPENDIX B

TETRA TECH'S LIMITATIONS ON THE USE OF THIS DOCUMENT

LIMITATIONS ON USE OF THIS DOCUMENT

GEOENVIRONMENTAL

1.1 USE OF DOCUMENT AND OWNERSHIP

This document pertains to a specific site, a specific development, and a specific scope of work. The document may include plans, drawings, profiles and other supporting documents that collectively constitute the document (the "Professional Document").

The Professional Document is intended for the sole use of TETRA TECH's Client (the "Client") as specifically identified in the TETRA TECH Services Agreement or other Contractual Agreement entered into with the Client (either of which is termed the "Contract" herein). TETRA TECH does not accept any responsibility for the accuracy of any of the data, analyses, recommendations or other contents of the Professional Document when it is used or relied upon by any party other than the Client, unless authorized in writing by TETRA TECH.

Any unauthorized use of the Professional Document is at the sole risk of the user. TETRA TECH accepts no responsibility whatsoever for any loss or damage where such loss or damage is alleged to be or, is in fact, caused by the unauthorized use of the Professional Document.

Where TETRA TECH has expressly authorized the use of the Professional Document by a third party (an "Authorized Party"), consideration for such authorization is the Authorized Party's acceptance of these Limitations on Use of this Document as well as any limitations on liability contained in the Contract with the Client (all of which is collectively termed the "Limitations on Liability"). The Authorized Party should carefully review both these Limitations on Use of this Document and the Contract prior to making any use of the Professional Document. Any use made of the Professional Document by an Authorized Party constitutes the Authorized Party's express acceptance of, and agreement to, the Limitations on Liability.

The Professional Document and any other form or type of data or documents generated by TETRA TECH during the performance of the work are TETRA TECH's professional work product and shall remain the copyright property of TETRA TECH.

The Professional Document is subject to copyright and shall not be reproduced either wholly or in part without the prior, written permission of TETRA TECH. Additional copies of the Document, if required, may be obtained upon request.

1.2 ALTERNATIVE DOCUMENT FORMAT

Where TETRA TECH submits electronic file and/or hard copy versions of the Professional Document or any drawings or other project-related documents and deliverables (collectively termed TETRA TECH's "Instruments of Professional Service"), only the signed and/or sealed versions shall be considered final. The original signed and/or sealed electronic file and/or hard copy version archived by TETRA TECH shall be deemed to be the original. TETRA TECH will archive a protected digital copy of the original signed and/or sealed version for a period of 10 years.

Both electronic file and/or hard copy versions of TETRA TECH's Instruments of Professional Service shall not, under any circumstances, be altered by any party except TETRA TECH. TETRA TECH's Instruments of Professional Service will be used only and exactly as submitted by TETRA TECH.

Electronic files submitted by TETRA TECH have been prepared and submitted using specific software and hardware systems. TETRA TECH makes no representation about the compatibility of these files with the Client's current or future software and hardware systems.

1.3 STANDARD OF CARE

Services performed by TETRA TECH for the Professional Document have been conducted in accordance with the Contract, in a manner consistent with the level of skill ordinarily exercised by members of the profession currently practicing under similar conditions in the jurisdiction in which the services are provided. Professional judgment has been applied in developing the conclusions and/or recommendations provided in this Professional Document. No warranty or guarantee, express or implied, is made concerning the test results, comments, recommendations, or any other portion of the Professional Document.

If any error or omission is detected by the Client or an Authorized Party, the error or omission must be immediately brought to the attention of TETRA TECH.

1.4 DISCLOSURE OF INFORMATION BY CLIENT

The Client acknowledges that it has fully cooperated with TETRA TECH with respect to the provision of all available information on the past, present, and proposed conditions on the site, including historical information respecting the use of the site. The Client further acknowledges that in order for TETRA TECH to properly provide the services contracted for in the Contract, TETRA TECH has relied upon the Client with respect to both the full disclosure and accuracy of any such information.

1.5 INFORMATION PROVIDED TO TETRA TECH BY OTHERS

During the performance of the work and the preparation of this Professional Document, TETRA TECH may have relied on information provided by persons other than the Client.

While TETRA TECH endeavours to verify the accuracy of such information, TETRA TECH accepts no responsibility for the accuracy or the reliability of such information even where inaccurate or unreliable information impacts any recommendations, design or other deliverables and causes the Client or an Authorized Party loss or damage.

1.6 GENERAL LIMITATIONS OF DOCUMENT

This Professional Document is based solely on the conditions presented and the data available to TETRA TECH at the time the data were collected in the field or gathered from available databases.

The Client, and any Authorized Party, acknowledges that the Professional Document is based on limited data and that the conclusions, opinions, and recommendations contained in the Professional Document are the result of the application of professional judgment to such limited data.

The Professional Document is not applicable to any other sites, nor should it be relied upon for types of development other than those to which it refers. Any variation from the site conditions present, or variation in assumed conditions which might form the basis of design or recommendations as outlined in this report, at or on the development proposed as of the date of the Professional Document requires a supplementary investigation and assessment.

TETRA TECH is neither qualified to, nor is it making, any recommendations with respect to the purchase, sale, investment or development of the property, the decisions on which are the sole responsibility of the Client.

1.7 NOTIFICATION OF AUTHORITIES

In certain instances, the discovery of hazardous substances or conditions and materials may require that regulatory agencies and other persons be informed and the client agrees that notification to such bodies or persons as required may be done by TETRA TECH in its reasonably exercised discretion.

No. of samples analysed	: 23		

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Michelle Schroder	Laboratory Analyst	Inorganics, Edmonton, Alberta
Yan Zhang	Lab Analyst	Organics, Edmonton, Alberta

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
meq/L	milliequivalents per litre
mg/L	milligrams per litre
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Qualifiers

Qualifier	*Description*
DLDS	*Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.*
DLM	*Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).*
RRV	*Reported result verified by repeat analysis.*

QUALITY CONTROL INTERPRETIVE REPORT

Work Order	: **EO2309502**	Page	: 1 of 64
Amendment	: 1		
Client	: **Tetra Tech Canada Inc.**	Laboratory	: ALS Environmental - Edmonton
Contact	: Brent Finnestad	Account Manager	: Kieran Tordoff
Address	: North Building 14940 123 Ave NW Edmonton AB Canada T5V 1B4	Address	: 9450 - 17 Avenue NW Edmonton, Alberta Canada T6N 1M9
Telephone	: 780-718-9317	Telephone	: +1 780 413 5227
Project	: 704-SWM.SWOP04810-01	Date Samples Received	: 17-Oct-2023 15:36
PO	: 704-SWM.SWOP04810-01	Issue Date	: 02-Nov-2023 14:52
C-O-C number	: ----		
Sampler	: ----		
Site	: ----		
Quote number	: EO23-EBAE100-006 (Q83988)		
No. of samples received	: 23		
No. of samples analysed	: 23		

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.
CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.
DQO: Data Quality Objective.
LOR: Limit of Reporting (detection limit).
RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "---" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Matrix Spike outliers occur.
- Duplicate outliers occur - please see following pages for full details.
- Laboratory Control Sample (LCS) outliers occur - please see following pages for full details.
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- Analysis Holding Time Outliers exist - please see following pages for full details.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **Water**

Analyte Group	Laboratory sample ID	Client/Ref Sample ID	Analyte	CAS Number	Method	Result	Limits	Comment
Duplicate (DUP) RPDs								
Anions and Nutrients	Anonymous	Anonymous	Chloride	16887-00-6	E235.Cl	54.2 %	20%	Duplicate RPD does not meet the DQO for this test.
Laboratory Control Sample (LCS) Recoveries								
Dissolved Metals	QC-1197253-002	----	Iron, dissolved	7439-89-6	E421	121 % MES	80.0-120%	Recovery greater than upper control limit
Dissolved Metals	QC-1197253-002	----	Potassium, dissolved	7440-09-7	E421	121 % MES	80.0-120%	Recovery greater than upper control limit
Dissolved Metals	QC-1197253-002	----	Selenium, dissolved	7782-49-2	E421	129 % MES	80.0-120%	Recovery greater than upper control limit
Dissolved Metals	QC-1197254-002	----	Selenium, dissolved	7782-49-2	E421	130 % MES	80.0-120%	Recovery greater than upper control limit

Dissolved Metals	QC-1197254-002	----	Sulfur, dissolved	7704-34-9	E421	122 % MES	80.0-120%	Recovery greater than upper control limit
Dissolved Metals	QC-1197254-002	----	Zinc, dissolved	7440-66-6	E421	124 % MES	80.0-120%	Recovery greater than upper control limit

Result Qualifiers

Qualifier	*Description*
MES	*Data Quality Objective was marginally exceeded (by < 10% absolute) for < 10% of analytes in a Multi-Element Scan / Multi-Parameter Scan (considered acceptable as per OMOE & CCME).*

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Legend & Qualifier Definitions

EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended

EHT: Exceeded ALS recommended hold time prior to analysis.

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: **Water**

Evaluation: × = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type			Count		Frequency (%)		
Analytical Methods	*Method*	*QC Lot #*	*QC*	*Regular*	*Actual*	*Expected*	*Evaluation*

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Conductivity in Water	E100 ALS Environmental - Calgary	Water	APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a water sample. Conductivity measurements are temperature-compensated to 25°C.
pH by Meter	E108 ALS Environmental - Calgary	Water	APHA 4500-H (mod)	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally 20 ± 5°C). For high accuracy test results, pH should be measured in the field within the recommended 15 minute hold time.
TSS by Gravimetry	E160 ALS Environmental - Edmonton	Water	APHA 2540 D (mod)	Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, following by drying of the filter at 104 ± 1°C, with gravimetric measurement of the filtered solids. Samples containing very high dissolved solid content (i.e. seawaters, brackish waters) may produce a positive bias by this method. Alternate analysis methods are available for these types of samples.
TDS by Gravimetry	E162 ALS Environmental - Edmonton	Water	APHA 2540 C (mod)	Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, with evaporation of the filtrate at 180 ± 2°C for 16 hours or to constant weight, with gravimetric measurement of the residue.
Chloride in Water by IC	E235.Cl ALS Environmental - Edmonton	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Fluoride in Water by IC	E235.F ALS Environmental - Edmonton	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite in Water by IC	E235.NO2 ALS Environmental - Edmonton	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate in Water by IC	E235.NO3 ALS Environmental - Edmonton	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Sulfate in Water by IC	E235.SO4 ALS Environmental - Edmonton	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Alkalinity Species by Titration	E290 ALS Environmental - Calgary	Water	APHA 2320 B (mod)	Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.
Ammonia by Fluorescence	E298 ALS Environmental - Edmonton	Water	Method Fialab 100, 2018	Ammonia in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021)
Total Kjeldahl Nitrogen by Fluorescence (Low Level)	E318 ALS Environmental - Edmonton	Water	Method Fialab 100, 2018	TKN in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021).
Dissolved Organic Carbon by Combustion (Low Level)	E358-L ALS Environmental - Calgary	Water	APHA 5310 B (mod)	Dissolved Organic Carbon (Non-Purgeable), also known as NPOC (dissolved), is a direct measurement of DOC after a filtered (0.45 micron) sample has been acidified and purged to remove inorganic carbon (IC). Analysis is by high temperature combustion with infrared detection of CO2. NPOC does not include volatile organic species that are purged off with IC. For samples where the majority of DC (dissolved carbon) is comprised of IC (which is common), this method is more accurate and more reliable than the DOC by subtraction method (i.e. DC minus DIC).
Total Phosphorus by Colourimetry (0.001 mg/L)	E372-S ALS Environmental - Edmonton	Water	APHA 4500-P E (mod).	Total Phosphorus is determined colourimetrically after heated persulfate digestion of the sample.
Dissolved Metals in Water by CRC ICPMS	E421 ALS Environmental - Edmonton	Water	APHA 3030B/EPA 6020B (mod)	Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS. Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.
Dissolved Mercury in Water by CVAAS	E509 ALS Environmental - Edmonton	Water	APHA 3030B/EPA 1631E (mod)	Water samples are filtered (0.45 um), preserved with HCl, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.
Chemical Oxygen Demand by Colourimetry (Low Level)	E559-L ALS Environmental - Edmonton	Water	APHA 5220 D (mod)	Samples are analyzed using the closed reflux colourimetric method.
Phenols (4AAP) in Water by Colorimetry	E562 ALS Environmental - Edmonton	Water	EPA 9066	This automated method is based on the distillation of phenol and subsequent reaction of the distillate with alkaline ferricyanide (K3Fe(CN)6) and 4-amino-antipyrine (4-AAP) to form a red complex which is measured colorimetrically.

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
CCME PHC - F1 by Headspace GC-FID	E581.F1 ALS Environmental - Edmonton	Water	CCME PHC in Soil - Tier 1	CCME Fraction 1 (F1) is analyzed by static headspace GC-FID. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law. Analytical methods for CCME Petroleum Hydrocarbons (PHCs) are validated to comply fully with the Reference Method for the Canada-Wide Standard for PHC. Unless qualified, all required quality control criteria of the CCME PHC method have been met, including response factor and linearity requirements.
CCME PHCs - F2-F4 by GC-FID	E601 ALS Environmental - Edmonton	Water	CCME PHC in Soil - Tier 1	Sample extracts are analyzed by GC-FID for CCME hydrocarbon fractions (F2-F4). Analytical methods for CCME Petroleum Hydrocarbons (PHCs) are validated to comply fully with the Reference Method for the Canada-Wide Standard for PHC. Unless qualified, all required quality control criteria of the CCME PHC method have been met, including response factor and linearity requirements.
BTEX by Headspace GC-MS	E611A ALS Environmental - Edmonton	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
Dissolved Hardness (Calculated)	EC100 ALS Environmental - Edmonton	Water	APHA 2340B	"Hardness (as CaCO3), dissolved" is calculated from the sum of dissolved Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations.
Ion Balance using Dissolved Metals	EC101 ALS Environmental - Edmonton	Water	APHA 1030E	Cation Sum, Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Dissolved species are used where available. Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).
TDS in Water (Calculation)	EC103 ALS Environmental - Edmonton	Water	APHA 1030E (mod)	Total Dissolved Solids is calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Dissolved species are used where available. Minor ions are included where data is present.
Nitrate and Nitrite (as N) (Calculation)	EC235.N+N ALS Environmental - Edmonton	Water	EPA 300.0	Nitrate and Nitrite (as N) is a calculated parameter. Nitrate and Nitrite (as N) = Nitrite (as N) + Nitrate (as N).
F1-BTEX	EC580 ALS Environmental - Edmonton	Water	CCME PHC in Soil - Tier 1	F1-BTEX is calculated as follows: F1-BTEX = F1 (C6-C10) minus benzene, toluene, ethylbenzene and xylenes (BTEX).

Preparation Methods	Method / Lab	Matrix	Method Reference	Method Descriptions

Preparation Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Preparation for Ammonia	EP298 ALS Environmental - Edmonton	Water		Sample preparation for Preserved Nutrients Water Quality Analysis.
Digestion for TKN in water	EP318 ALS Environmental - Edmonton	Water	APHA 4500-Norg D (mod)	Samples are digested at high temperature using Sulfuric Acid with Copper catalyst, which converts organic nitrogen sources to Ammonia, which is then quantified by the analytical method as TKN. This method is unsuitable for samples containing high levels of nitrate. If nitrate exceeds TKN concentration by ten times or more, results may be biased low.
Preparation for Dissolved Organic Carbon for Combustion	EP358 ALS Environmental - Calgary	Water	APHA 5310 B (mod)	Preparation for Dissolved Organic Carbon
Digestion for Total Phosphorus in water	EP372 ALS Environmental - Edmonton	Water	APHA 4500-P E (mod).	Samples are heated with a persulfate digestion reagent.
Dissolved Metals Water Filtration	EP421 ALS Environmental - Edmonton	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HNO3.
Dissolved Mercury Water Filtration	EP509 ALS Environmental - Edmonton	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HCl.
VOCs Preparation for Headspace Analysis	EP581 ALS Environmental - Edmonton	Water	EPA 5021A (mod)	Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler. An aliquot of the headspace is then injected into the GC/MS-FID system.
PHCs and PAHs Hexane Extraction	EP601 ALS Environmental - Edmonton	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) and Polycyclic Aromatic Hydrocarbons (PAHs) are extracted using a hexane liquid-liquid extraction.

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.
CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.
DQO = Data Quality Objective.
LOR = Limit of Reporting (detection limit).
RPD = Relative Percent Difference
# = Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "---" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: **Water**

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: **Water**

Qualifiers

Qualifier	Description
MES	*Data Quality Objective was marginally exceeded (by < 10% absolute) for < 10% of analytes in a Multi-Element Scan / Multi-Parameter Scan (considered acceptable as per OMOE & CCME).*

Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

Drinking Water (DW) Samples[1] (client use)

Are samples taken from a Regulated DW System?
☐ YES ☐ NO

Are samples for human consumption/ use?
☐ YES ☐ NO

Notes / Specify Limits for result evaluation by selecting from drop-down below (Excel COC only)

* Dissolved Metals is Filtered bA Not Perserved.
Mercury → Filtered and perserved.

SAMPLE RECEIPT DETAILS (ALS use only)

Cooling Method: ☐ NONE ☐ ICE ☐ ICE PACKS ☐ FROZEN ☐ COOLING INITIATED

Submission Comments identified on Sample Receipt Notification: ☐ YES ☐ NO

Cooler Custody Seals Intact: ☐ YES ☐ N/A Sample Custody Seals Intact: ☐ YES ☐ N/A

INITIAL COOLER TEMPERATURES °C				FINAL COOLER TEMPERATURES °C			

SHIPMENT RELEASE (client use)

Released by:	Date:	Time:
Fahim Nazari	Oct-17-2023	1510
