

Clandestine Lab Cleanup Services

Fact Sheet

When law enforcement officers or emergency responders discover clandestine labs of chemicals used for drug making or other unlawful purposes, Clean Harbors has the capabilities to respond on a 24-hour call out basis and manage the chemicals from the scene to final destruction in accordance with all federal, state, and local laws and regulations. Time is key and Clean Harbors is ready to respond quickly and effectively.

Complete Management of Chemicals

Upon arriving on scene, our specialists collect, label, segregate, package, and prepare the chemical waste for offsite transportation and disposal. Drug ingredients are adulterated prior to packing and transporting from the removal site to ensure no further use.

All chemicals are packaged in accordance with Department of Transportation (DOT) Performance Oriented Packaging (POP) containers and disposed of according to all Environmental Protection Agency (EPA) regulations.

Unknown Chemical Disposal

Unknown chemical evaluations and on-site cylinder management are handled by trained personnel. Clean Harbors will provide fingerprint analysis of unknown compounds, which allows the chemist to determine the physical properties of the chemical and package it with compatible materials.

Compressed Gas Cylinder Disposal

Our specialists can evaluate all cylinders to verify the contents, determine their transportability, and ascertain whether the material will be sent for recovery or disposal.

Shipment via Company-owned Transportation to Company-owned Facilities for Management

Company-owned trucks deliver the chemical waste to company-owned facilities for disposal. Clean Harbors has more than 175 locations with over 50 waste management facilities including incinerators and landfills.
