

North America's most advanced Incinerator is now keeping the air cleaner for all of us.

Our new Incinerator meets new source MACT emission standards, which are ten times more stringent for metals and particulate matter.

Our El Dorado, Arkansas unit meets the new source Maximum Achievable Control Technology (MACT) standard and Title V standards. This is achieved through the use of two dry particulate scrubbers and a Selective Catalytic Reduction (SCR) unit for nitrogen oxide control. Title V of the Clean Air Act requires major sources of air pollutants, and certain other sources, to obtain and operate in compliance with an operating permit.

The new unit gives us the ability to incinerate 65,000 more tons of waste per year – an expansion that's better for the environment and our customers.

The new Clean Harbors Incinerator at El Dorado, AR

- El Dorado is logistically positioned to receive waste from all of North America, but is easily accessible to the U.S Midwest and Gulf Coast regions.
- Provides railcar access to the incinerator allowing for direct burn railcars as well as tanker trucks.
- The new incinerator can take almost all types (flammable, corrosive, reactive, toxic) of waste in all forms: bulk solids, liquids, semisolids, sludge, drummed waste and flex bins.
- It is engineered to safely handle the most dangerous and toxic materials encountered in the chemical industry.
