

# CleanPack® Cabinet Services

## Fact Sheet

### We put the “safe” back in safety cabinets.

Clean Harbors offers businesses a safe, economical, and environmentally sound solution for disposal of fluids and chemicals in your workplace.

Flammable and corrosive safety cabinets are notorious for becoming “dumping grounds” and often develop into nothing more than a hiding place for expired or damaged containers. Sooner or later the cabinet will become a safety hazard and a compliance issue. We can handle the proper disposal of the materials and even replace your safety cabinet.

### Storage areas can create potential hazards.

- Leaking containers, unknown waste, prolonged accumulation of materials, and contaminated / corroded cabinet shelving all pose compliance and safety issues.
- Vapors of flammable liquids ignite and burn easily so strict storage requirements must be adhered to consistently to avoid fire hazard.
- Running out of room for other materials leads to unsafe storage practices.
- Poor organization leads to improper segregation of waste.

Let CleanPack® Cabinet Service eliminate your worries by removing these hazards from your business.

### CleanPack® Cabinet Service provides a simple solution for keeping your facility safe and compliant.

Using our resources and expertise, Clean Harbors offers industry leading environmental services for your cabinet clean out. Clean Harbors CleanPack® Cabinet Service provides a professionally-trained chemist that will inspect all materials in the cabinet and then pack, transport, and dispose of the materials as required by local, state or provincial, and federal laws. We leave your cabinet safe, compliant, and ready to use.
