## Laboratory Chemical Packing & Management Services Fact Sheet

### CleanPack® Services

Clean Harbors' CleanPack Services offers economical and environmentally sound disposal options of laboratory chemical waste. Our CleanPack chemists are skilled in chemical recognition and handling, and our network of storage and disposal facilities accepts and processes lab packed chemicals. Reclamation, fuels blending, high temperature incineration, aqueous treatment and secure chemical landfill disposal capabilities are available through our facilities.

Throughout North America, Clean Harbors offers a wide variety of services to both large and small quantity generators. Our services include:

- Lab Packing Services
- Environmental Management Software
- Unknown Chemical Disposal
- Compressed Gas Cylinder Management & Disposal
- Reactive Materials Handling
- Household Hazardous Waste
- Laboratory Moves
- CustomPack®

**Lab Packing Service** – Clean Harbors' staff of professionally trained CleanPack chemists collect, label and package your lab pack wastes in compliance with local, state, provincial and federal regulations. All lab pack waste can be removed from the site the day it is packaged, unless prohibited by law.

**Environmental Management Software** – Clean Harbors' chemists utilize proprietary environmental management software and laptop computers on-site to provide computer-generated manifests, packing slips, and labels. The system captures information that can be used in follow up reporting and cost allocation.

**Unknown Chemical Disposal** – We provide fingerprint analysis of lab pack quantity unknown compounds. This analysis allows the chemists to determine the physical properties of the chemical and package it with compatible materials.

### Compressed Gas Cylinder Management & Disposal

– Our chemists will evaluate all cylinders to verify or refute the contents, determine their transportability, and ascertain whether the material will be sent for recovery or disposal.

**Reactive Materials Handling** – Clean Harbors Reactive Materials Team provides on-site remediation and stabilization services for our customers that have compressed gas cylinders or potentially unstable, shock sensitive or explosive materials. The Reactive Materials Team utilizes state-of-the-art personal protective, project and safety equipment.

**Household Hazardous Waste** – Each year Clean Harbors performs thousands of Household Hazardous Waste (HHW) collection events for local, state, provincial and private agencies throughout North America.

**Laboratory Moves** – Clean Harbors has extensive experience in the relocation of laboratory chemicals. Our chemists will package the chemicals intended to be moved in the same manner as chemicals intended for disposal, following the same regulations and adhering to the same site-specific health and safety procedures.

**CustomPack®** – Clean Harbors has developed self-pack guidelines to enable trained and experienced generators to package their own waste chemicals for disposal through Clean Harbors.

### Summary of Clean Harbors' CleanPack Program -

Environmental managers at universities, state and local governments, pharmaceutical companies, major laboratories, hospitals and high technology firms across the country rely on Clean Harbors. And with good reason.
